Financial Aid; Tables (Data); Teacher Characteristics; Vocational Education

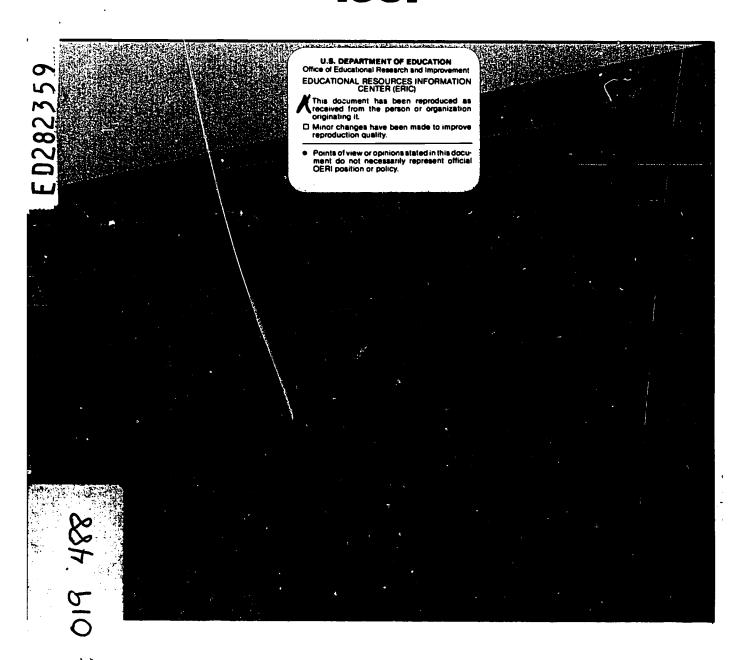

### ABSTRACT

This document, consisting of 7 chapters, 20 figures, and 261 tables, provides large amounts of statistical data on most aspects of United States education, both public and private. The chapters cover (1) all levels of education; (2) elementary and secondary education; (3) postsecondary education, including college and university education and adult and technical education; (4) federal programs for education and related activities; (5) economic outcomes of education; (6) international education; and (7) learning resources and technology. Information is presented on a variety of subjects, including the number of schools and colleges, teachers, enrollments, graduates, educational attainment, finances, federal funds for education, employment and income of graduates, libraries, and international education. Included among data not appearing in previous editions of the document are the following: trends in population, economic and price index data, staffing ratios in public schools by state, racial and ethnic enrollment in colleges, and unemployment rates by educational attainment. New sections include a guide to tabular presentation to provide a legend for symbols and indexes, and definition of terms used. A short introduction highlights major findings, and each chapter contains a brief overview of significant trends. An index is included. (WTH)

### **Center for Education Statistics**

"The purpose of the Center shall be to collect and analyze and disseminate statistics and other data related to education in the United States and in other nations. The Center shall, if feasible, on a State by State basis, ... collect, collate, and, from time to time, report full and complete statistics on the conditions of education in the United States; conduct and publish reports on specialized analyses of the meaning and significance of such statistics; ... and review and report on education activities in foreign countries."—Section 406(b) of the General Education Provisions Act, as amended (20 U.S.C. 1221e-1).

May 1987

### **Foreword**

The 1987 edition of the Digest of Education Statistics is the 23rd in a series of publications initiated in 1962. (The Digest has been issued annually except for combined editions for the years 1977-78, 1983-84, and 1985-86.) Its primary purpose is to provide an abstract of statistical information covering the broad field of American education from nursery school through graduate school. The Digest includes a selection of data from many sources, both government and private, and draws especially on the results of surveys and activities carried out by the Center for Education Statistics. The publication contains information on a variety of subjects within the field of education statistics, including the number of schools and colleges, teachers, enrollments, graduates, educational attainment, finances, Federal funds for education, employment and income of graduates, libraries, and international education. Supplemental information on population trends, education characteristics of the labor force, government finances, and economic trends provides background for evaluating education data.

The Digest is divided into seven chapters: All Levels of Education, Elementary and Secondary Education, Postsecondary Education, Federal Programs for Education and Related Activities, Economic Outcomes of Education, International Education, and Learning Resources and Technology. To qualify for inclusion in this publication, material must be nationwide in scope and of current interest and value. The introduction supplements the tabular materials in chapters I through VII by providing a brief overview of current trends in American education.

In addition to updating many of the statistics that have appeared in previous years, this edition contains a substantial amount of new material, including expanded coverage of important trends at the State level and augmented school district and institutional data. Other first-time statistics are:

Detailed statistics on educational attainment;

- Literacy statistics on the adult population from the National Assessment of Educational Progress;
- Data from teacher and general public opinion polls;
- Trends in population, economic, and price index data;
- Enrollment in public schools, by grade and State;
- Minimum-competency testing programs, by State;
- School discipline in public secondary schools;
- Staffing ratios in public schools, by State;
- Trends in average daily attendance, by State;
- Trends in college enrollments, by State;
- Full-time-equivalent enrollments in colleges, by State;
- Racial and ethnic enrollment in colleges, by State;
- Detailed data on faculty salaries and tenure status, by rank, sex, type, and control of institution;
- Trends in college finances, by control of institution;
- Trends in additions to the plant value of colleges;
- Unemployment rates, by educational attainment;
- Enrollment ratios for the 60 largest nations;
- Statistics on public school libraries, by type and size; and
- Use of information technologies by young adults and the general population.

We have also added several new sections for the convenience of users:

- Chapter Highlights to present significant statistics from each chapter;
- Guide to Tabular Presentation to explain the basic structure of *Digest* tables and to provide a legend for some of the common symbols and indexes used throughout the book; and
- Definitions for the terms used in this publication.

In addition to Thomas D. Snyder, who was responsible for the overall development and

ERIC Full Text Provided by ERIC

5 "

preparation of this *Digest*, a number of other people have contributed to its development. Foremost among these contributors is W. Vance Grant, who served as an editor of this series from its inception 25 years ago through the 22nd edition. His developmental work has made this publication the widely used report it is today, and his knowledge and patient instruction have guided many through perplexing problems in education statistics.

In particular, we wish to acknowledge Charlene Hoffman for her technical assistance in all phases of preparing the *Digest*. Special computer analyses were provided by Paul Horn and Bill Sonnenberg. Pat Brown and Zola Brown made a number of contributions in the preparation of tabular material for this report. Kate Dorrell provided editorial assistance, and Phil Carr managed typesetting and layout.

This year's edition marks the first time the Digest has received extensive reviews by individuals both within and outside the Department of Education. We wish to thank these persons for their time and effort. Within the Office of Educational Research and Improvement (OERI), James Carper, Chuck Cowan, W. Vance Grant, and Mary Frase Williams provided reviews of the entire manuscript. OERI

staff who reviewed portions of the manuscript were: Daniel Antonoplos, Judith Carpenter, Dennis Carroll, Geneva Davis, Theodore Drews, William Freund, Kent Halstead, Jerome Lord, Robert Thomas, Duc-Le To, George Wade, and Douglas Wright. Rosemary Clark (U.S. Bureau of the Census), Alan Ginsburg (U.S. Department of Education, Office of Planning, Budget, and Evaluation), John D. Klenk (U.S. Department of Education Office of the Under Secretary), Daniel B. Levine (National Academy of Sciences), Eugene McLoone (University of Maryland), and Ramsay W. Selden (Council of Chief State School Officers) also reviewed the entire document.

In the past, the *Digest of Education Statistics* has proved to be of interest and value to educational researchers and administrators, government officials, the communications media, the business community, and the general public. We trust that the users of this 23rd edition will find it just as valuable as its predecessors.

Paul R. Hall, Director Condition of Education Division Leo J. Eiden, Leader Special Projects Team February 1987

<b>33</b> .	Membership and attendance in public elementary and secondary schools, by State: 1980-81 and 1984-85
34.	Average daily attendance in public elementary and secondary schools, by State: 1969-70 to 1984-85
<b>35</b> .	Enrollment in public elementary and secondary schools, by race or ethnicity and State: Fall 1984
36.	Public school pupils transported at public expense and current expenditures for transportation: United States, 1929-30 to 1983-84
37.	Enrollment of 3-, 4-, and 5-year-old children in preprimary programs, by level, control of program, and age: United States, October 1965 to October 1985
<b>38</b> .	Percent of children 3 to 21 years old served in special educational programs, by type of handicap: United States, 1976-77 to 1984-85
39.	Enrollment in grades 9 to 12 in public and private schools compared with population 14 to 17 years of age: United States, 1889-90 to fall 1985 50
<b>40</b> .	Enrollment in foreign language courses compared with enrollment in grades 9 to 12 of public secondary schools: United States, fall 1948 to fall 1982
Prive	nte Elementary and Secondary Schools
<b>4</b> 1.	Summary statistics on private elementary and secondary schools, by level and affiliation of school: United States, fall 1983
<b>42</b> .	Enrollment, teachers, and high school graduates in private elementary and secondary schools, by State: Fall 1980 and 1979-80
43.	Characteristics of private school teachers, by level and affiliation of school: United States, 1985-86
44.	Characteristics of private schools, by level and affiliation of school: United States, 1985-86
<b>45</b> .	Summary statistics on Catholic elementary and secondary schools, by level: United States, 1919-20 to 1985-86
Teac	hers and Other Instructional Staff
46.	Public and private elementary and secondary teachers and pupil-teacher ratios, by level: United States, fall 1955 to fall 1990
47.	Public elementary and secondary teachers, by level and State: Fall 1983 to fall 1985
48.	Teachers, enrollment, and pupil-teacher ratios in public elementary and secondary schools, by State: Fall 1983 to fall 1985

49.	Selected characteristics of public school teachers: United States, spring 1961 to spring 198360
50.	Public secondary school teachers, by subject taught: United States, spring 1961 to spring 1981
51.	Estimated average annual salary of teachers in public elementary and secondary schools: United States, 1959-60 to 1985-86
<b>52</b> .	Estimated average annual salary of teachers in public elementary and secondary schools, by State: 1969-70 to 1985-86
53.	Average annual salary of instructional staff in public elementary and secondary schools and average annual earnings of full-time employees in all industries:  United States, 1929-30 to 1985-86
54.	Average annual salary of instructional staff in public elementary and secondary schools, by State: 1939-40 to 1985-86
55.	Staff employed in public school systems, by type of assignment and State: Fall 1985
56.	Staff employed in public school systems, by type of assignment and State: Fall 1984
<b>57</b> .	Staff and teachers in public elementary and secondary schools, by State: Fall 1983 to fall 1985
<b>58</b> .	Staff, enrollment, and pupil-staff ratios in public elementary and secondary schools, by State: Fall 1983 to fall 1985
Scho	ools and School Districts
59.	Public school districts and public and private elementary and secondary schools: United States, 1929-30 to 1983-84
60.	Public school districts, enrollment, and schools, by size of district: United States, fall 1983
61.	Public school districts, by State: Fall 1982 and fall 1983
62.	Enrollment of the 120 largest public school districts in 1983-84
63.	Selected statistics for public school districts enrolling more than 25,000 pupils, by State: 1983-84
64.	Regular public elementary and secondary schools, by type of school: United States, 1970-71 to 1983-84
65.	Public elementary and secondary schools, by type and size of school: United States, 1983-84
66.	Public elementary and secondary schools, by type and State: 1983-84
67.	Public elementary schools, by grade span and State: 1983-84
88.	Public secondary schools, by grade span and State: 1983-84 82
High	School Seniors, Completions, and Dropouts
69.	High school graduates compared with population 17 years of age: United States, 1869-70 to 1984-85
70.	GED credentials issued, by age of recipient: United States, 1974 to 1985
71.	Public high school graduates, by State: 1969-70 to 1984-85 85

### Introduction

In the fall of 1986, about 57.7 million persons were enrolled in American schools and colleges (table 1). About 3.3 million were employed as elementary and secondary school teachers and as college instructors. Other professional, administrative, and support staff of educational institutions numbered 3.4 million. Thus, in the fall of 1986, approximately 64.4 million Americans were involved, directly or indirectly, in providing or receiving formal education. In a Nation with a population of 241 million, about 1 out of every 4 persons participated in the educational process.

Enrollment in elementary and secondary schools grew rapidly during the 1950's and 1960's and peaked in 1971 (table 2). This enrollment rise was caused by the baby boom, a dramatic increase in the births following World War II. From 1971 to 1984 total enrollment decreased steadily, reflecting the decline in the school-age population over that period. After these years of decline, enrollment in public elementary and secondary schools showed a small increase in the fall of 1985 (table 3): Enrollment in kindergarten through grade 8 rose from 27.0 million in fall 1985 to an estimated 27.4 million in fall 1986, though enrollment in the upper grades declined slightly from 12.5 million to an estimated 12.4 million. This trend of increasing public school enrollments is expected to continue, but trends in elementary and in secondary enrollment are expected to contrast sharply through the decade.

Fall 1985's increase in preprimary and early elementary enrollment indicates a new trend that will affect elementary and secondary schools for a number of years. Projections of the Center for Education Statistics (CES) indicate that elementary school enrollment will increase annually during the later 1980's reacning 34.1 million in 1990 (table 3). Between fall 1986 and fall 1990, elementary enrollment is projected to grow by 8 percent, while secondary school enrollment is expected to decline by 9 percent. The new wave of pupils will then begin to cause increases at the

secondary school level. Annual increases in enrollment in grades 9 through 12 are expected for a number of years beginning in the early 1990's.

Enrollment in colleges and universities is being affected by a continuing decline in the population of 18- to 24-year-olds (table 12). The number of persons in this age group peaked in 1981 and then began a decline that is expected to continue throughout the next 10 years. College enrollment in fall 1986 was estimated at 12.4 million (table 2)—up about 1 percent from the previous fall. Moderate decreases are projected in the number of college students from 1987 to 1990. Recent trends suggest that total enrollment will remain relatively high because of increased participation of older women students and also because of an increasing rate of college attendance for recent high school graduates. Although total enrollment may remain relatively stable, some shifts of students from fulltime to part-time status are expected.

Nearly 2.6 million elementary and secondary school teachers were engaged in classroom instruction in the fall of 1986 (table 4). This represents almost no change from the number of teachers employed a year earlier. The number of public school teachers in 1986 was about 2.2 million and the number in private schools was estimated at 0.3 million. About 1.5 million teachers were teaching in elementary schools, while about 1.1 million were employed at the secondary level.

Overall, the trend in recent years has been for the number of public school teachers to remain relatively stable, while enrollment has declined. The result has been a continuing improvement in the pupil-teacher ratio. In the fall of 1985 there were 17.7 pupils per teacher compared with 20.3 pupils per teacher 10 years earlier (table 46). The declining pupil-teacher ratio reflects smaller classes and specialized education programs.

Teacher salaries, which lost purchasing power to inflation during the 1970's, began to rise faster than the inflation rate in the early

1980's. According to data from the National Education Association, the value of teacher salaries, after adjustment for inflation, rose about 14 percent between 1980-81 and 1985-86. The average salary for teachers in 1985-86 was \$25,313, and the average salary increase over the previous year was more than twice the 2.9-percent inflation rate (table 51).

Other improvements have been registered in the reading proficiency of elementary and secondary school students. Reading proficiency of 9-, 13-, and 17-year-olds rose between 1970-71 and 1983-84 (table 74). In 1970-71, 58 percent of the 9-year-olds read at or above the basic level, compared to 64 percent in 1983-84. Minority children made very large gains. For example, the proportion of black 9-year-olds reading at a basic level or above rose from 22 percent in 1970-71 to 39 percent in 1983-84.

Scores on the Scholastic Aptitude Test (SAT) administered by the College Board have risen in recent years. After a decline during the 1970's, the SAT scores began increasing in 1981-82 (table 80). From 1980-81 to 1985-86, the average SAT combined verbal and mathematics score rose 16 points from 890 to 906.

The number of high school graduates in 1984-85 totaled about 2.7 million. About 2.4 million graduated from public schools, and about 0.3 million graduated from private schools. The number of high school graduates has been declining since its peak in 1977, when 3.2 million persons earned their diplomas. Although the number of graduates has been falling in recent years, the proportion of 17-year-olds graduating from high school ness been increasing. This increase in the graduation rate rose each year from 1980-81 to 1984-85 (table 69).

The number of postsecondary degrees to be conferred during the year 1986-87 is estimated to be: 978,000 bachelor's degrees; 286,000 master's degrees; 32,700 doctor's degrees; and 75,600 first-professional degrees. The number of first-professional degrees is expected to be at or near an all-time high. The other figures are down slightly from their peaks, during 1985 (bachelor's), 1977 (master's), and 1973 (doctor's) (table 150). Although associate degree data have not been projected by CES, they are expected to be down slightly from the total of 454,700 reported in 1984-85.

The Bureau of the Census has collected annual statistics on the educational attainment

of the population in terms of years of school completed. These data indicate that between 1970 and 1985 the proportion of the adult population 25 years of age and over with 4 years of high school or more rose from 55 to 74 percent. The percent of adults with at least 4 years of college increased from 11 to 19 percent (table 8).

Expenditures for public and private education from preprimary through graduate school totaled about \$247 billion in 1984-85, and preliminary estimates indicate that they will reach \$282 billion in 1986-87 (table 22). The expenditures of elementary and secondary schools are expected to total about \$170 billion for 1986-87, while institutions of higher education will spend about \$112 billion. The outlays of public schools and colleges are expected to reach \$229 billion, while the privately controlled institutions are expected to spend about \$54 billion. Viewed in another context, the total expenditure for education has amounted to nearly 7 percent of the gross national product each year during recent years and is expected to remain at that same level in 1986-87 (table 21).

The statistical highlights above provide a quantitative description of the current American education scene. It is clear from the large number of participants, the number of years that people spend in school, and the vast sums expended by educational institutions that the American people have a high regard for learning. The increases in graduation ratios, reading proficiency, and SAT scores suggest that some improvements in education have been made in recent years.

Readers should be aware that the accuracy and comparability of statistics may vary with the exact nature of a particular survey. For example, estimates based on a sample of institutions will differ somewhat from the figures that would have been obtained if a complete census had been taken using the same survey procedures. Although many of the surveys conducted by the Center for Education Statistics are census type surveys, all surveys are subject to design, reporting, and processing errors and errors due to nonresponse. More information on survey methodologies can be found in the Guide to Sources in this volume.

### Chapter I

### All Levels of Education

The purpose of this chapter is to provide a broad overview of education in the United States. It brings together material from preprimary, elementary, secondary, and higher education and from the general population to present a composite picture of the American educational system. It contains tables which show the total number of persons enrolled in school, the number of teachers, the number of schools, and total expenditures for education at all levels. The chapter also includes statistics on education-related topics such as educational attainment, family characteristics, population, illiteracy, and opinions about schools. Economic indicators and price indexes have been added to assist researchers in preparing comparative analyses.

Figure 1 provides a graphic presentation of the structure of education in the United States. The right side of the chart indicates the three levels of education—elementary, secondary, and postsecondary; the left gives the approximate age of persons at each level. As the chart indicates, pupils ordinarily spend from 6 to 8 years in the elementary grades followed by 4 to 6 years of high school. The entire 12-year program is normally completed at age 17 or 18.

High school graduates may enter a 2-year college, a technical institution, a 4-year college or university, or a professional school. A 2-year college normally offers the first 2 years of a standard 4-year college curriculum and a selection of vocational programs. Academic courses completed at a 2-year college may be transferable for credit at 4-year colleges and universities. A technical institute offers post-secondary technical training leading to a specific career.

An associate degree requires at least 2 years of college-level work, and a bachelor's degree normally can be earned in 4 years. At least 1 year beyond the bachelor's is necessary for a master's degree, while a doctor's degree usually requires a minimum of 3 or 4 years beyond the bachelor's.

Professional schools differ widely in requirements for admission and in length of programs.

Medical students, for example, generally complete a 4-year program of premedical studies at a college or university before they can enter the 4-year program at a medical school. Law programs normally require 3 years of coursework beyond the bachelor's degree.

Many of the statistics in this chapter are derived from the statistical activities of the Center for Education Statistics. In addition, substantial information has been drawn from the work of other groups, both government and nongovernment, as indicated in the source notes of the appropriate tables. Information on survey methodologies can be found in the Guide to Sources and in the publications cited in the source notes.

### **Highlights**

- In the fall of 1985, total elementary and secondary school enrollment increased for the first time since 1971. This increase was concentrated in the elementary grades. The patterns of enrollment growth at the elementary level and of enrollment decline at the secondary school level are expected to continue. Between 1986 and 1990, elementary enrollment is expected to rise 8 percent, while secondary enrollment is expected to fall by 9 percent. Overall, enrollment is expected to increase by about 1.3 million students or about 3 percent. (Table 2)
- Over the past 10 years, there has been a slight increase in the proportion of students in private schools and colleges. Between 1975 and 1985, the proportion of elementary and secondary school students in private schools rose from 10 percent to 12 percent. At the same time, the proportion of college students in private institutions rose from 21 percent to 23 percent. (Table 2)
- Estimated college enrollment rose slightly in fall 1986. College enrollment peaked in fall 1983 at 12.5 million and then declined in fall 1984. Drops in college enrollment are expected through the later 1980's because

### 4 ALL LEVELS OF EDUCATION

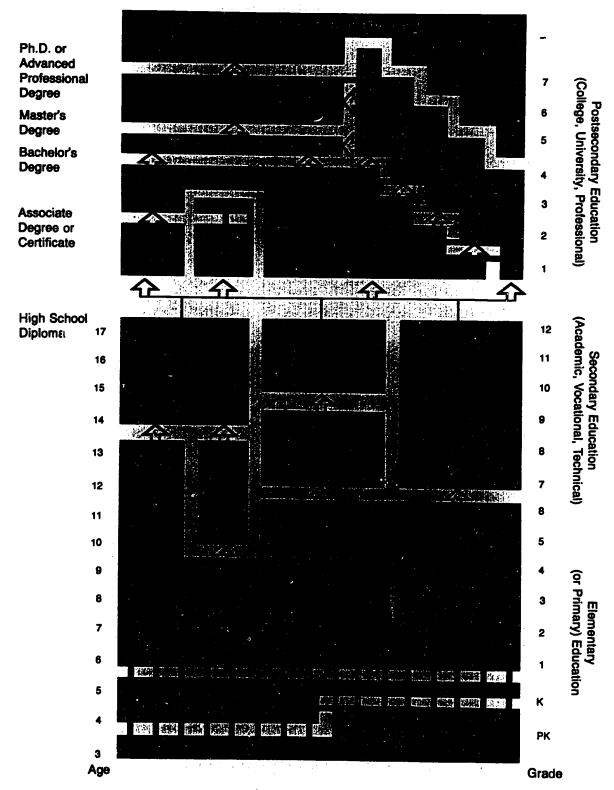

of the shrinking numbers of 18- to 24-yearolds. However, these declines are expected to be offset by the continuing increases in attendance rates of some age groups. (Tables 3 and 12)

- The proportion of certain age groups attending school has risen dramatically over the past two decades. In 1985, about 39 percent of 3- and 4-year-olds attended school compared to only 11 percent in 1965. The proportion of 30- to 34-year-olds attending college doubled from 3 to 6 percent. (Table 6)
- Increases in the amount of education completed by Americans continued in 1985. In 1985, 74 percent of the population 25 years old and over had completed high school, and 19 percent had completed 4 years of college. This represents a significant increase from 10 years earlier when 63 percent had completed high school, and 14 percent had 4 years of college. (Table 8)
- A 1985 survey of young adults found that the vast majority—more than 95 percent had basic literacy skills. On the other hand, only about one-fifth had high proficiency in several types of literacy skills. (Table 11)

- Between 1970 and 1984, there were substantial shifts in the composition of families. In 1970, 50 percent of families were married-couple families with children under 18 compared to 39 percent in 1984. In contrast, the proportion of families headed by women (no husband present) who had children under 18 rose from 6 percent to 10 percent. Altogether, about 1 out of 5 children under 18 lived with one parent in 1984. (Tables 15 and 16)
- According to results of a nationwide survey, Americans have rated public schools higher in recent years. Those surveyed felt that the two largest problems facing schools were drugs (28 percent) and lack of discipline (24 percent). (Tables 18 and 20)
- Education expenditures rose to a record high
  of \$282 billion in the 1986-87 school year.
  About 60 percent of these expenditures
  were for elementary and secondary schools,
  and the remaining 40 percent were for colleges and universities. Approximately 7 percent of the gross national product is spent by
  elementary and secondary schools and colleges and universities. (Tables 21 and 22)

Table 1.—Estimated number of participants in elementary and secondary education and in higher education: United States, fall 1986

[In millions]

	All levels (elementary,	Elementa	Institutions		
Participants	secondary, and higher education)	Total	Public	Private	of higher education <sup>1</sup>
1	2	3	4	5	6
Total	64.4	50.0	43.8	6.1	14.4
Enrollment <sup>2</sup> Teachers and faculty Other professional, administrative, and support staff	3.3	45.3 2.6 2.1	39.7 2.2 1.9	5.6 0.3 0.2	<sup>3</sup> 12.4 40.7 1.3

\*Includes colleges and universities, but excludes noncollegiste postsec-

ndary institutions.

Includes enrollments in local public school systems and in m rinciuoss enroments in local public school systems and in most privata schools (religiously affiliated and nonsectarian). Excludas subcollagiata departments of inetitutions of higher education, residential schools for acceptional children, and Faderal schools. Elementary and secondary includes most kindergarten and some nursery school enrollment. Excludes preprimary enrollment in schools that do not offer first grade. Higher education comprises full-and part-time students enrolled in degree- and nondegree-credit programs in universities, other 4-year colleges, and 2-year colleges.

Preliminary data.

Includes full-time and part-time faculty with the rank of instructor or above. \*includes full-time and part-time raculty with the rank of instructor of above. NOTE: The enrollment figures include all students and sided in elementary and secondary schools and in colleges and universities. The data for taschers and other staff in public and private elementary and secondary schools are reported in terms of full-time equivalents. The staff data for institutions of higher education include all professional, administrative, and support personnel. Because of rounding, details may not add to totals.

<sup>1</sup>Beginning in fall 1980, data include estimates for an expanded universe of private schools. Therefore, these totals may differ from figures shown in other tables, and direct comperisons with earlier years should be avoided.

<sup>2</sup>Data for 1889-70 through 1948-50 include resident degree-credit students anrolled at any time during the academic year. Data for 1959 include resident degree-credit students enrolled during the fail term of academic year 1958-60. Data for the years 1945 through 1966 include all resident and extension students enrolled at the beginning of the fall term.

<sup>3</sup>Estimated

\*Elementary and secondary data are estimated. Higher education data are

preminery.

--Date not available.

Note.—Elementary and secondary anrollment includes pupils in local public school systems and in most private schools (religiously affiliated and (nonsec-

tarian), but generally excludes pupils in subcollegiate departments of institutions of higher education, residential schools for exceptional children, and
Federal schools. Elementary enrollment includes a relatively small number of
prekindergarten pupils. Higher education enrollment includes students in
colleges, universities, professional schools, teachers colleges, and 2-year colleges. Because of rounding, details may not add to totals.

\*Includes persons 21 to 25 years old.

<sup>3</sup>Prose comprehination test measures the knowledge and skills needed to gein understanding and use information from texts such as editorials, news stories, and poems. A score of 200 indicates an ability to write a simple description of the type of job one would like to have. A score of 300 indicates an ability to locate information in a news article or an almanac. A score of 350 indicates an ability to synthesize the main argument from a lengthy newspaper editorial.

antorial. 3Document literacy test measures the knowledge and skills required to locate and use information from documents such as indexes, tables, psychock subs, and order forms. A score of 200 indicates ability to match money-saving coupons to a shopping list of several items. A score of 300 indicates an ability to follow directions to travel from one location to another using a map. A score of 350 indicates an ability to use a bus schedule to select the appropriate bus for given departures and arrivals.

\*Quantitative literacy test measures the knowledge and skills needed to

apply the arithmetic operations of addition, subtraction, multiplication, and division, either alone or sequentially. A score of 200 indicates an ability to total two entries on a bank deposit slip. A score of 300 indicates an ability to enter deposits and checks and balance a checkbook. A score of 350 indicates an ability to detarmine the amount of a tip in a restaurant using a given necessary.

percentage.

<sup>3</sup>The National Assessment of Educational Progress (NAEP) reading scale is based on a multiple-choice test which measures reading achievement. A score of 200 indicates an ability to understand specific or sequentially related information. A score of 300 indicates an ability to find, understand, summarize, and explain relatively complicated information. A score of 350 indicates an ability to synthesize and learn from specialized reading materials.

<sup>&</sup>lt;sup>1</sup>Some private elementary and secondary school revenues come from Federal, State, and local sources. However, comprehensive data are not available to delineate the sources of revenues for private schools.

for that year. Other Federal programs not included in this table because they do not support regular educational institutions would increase the Federal share even further. Typical examples of these payments would be Federal support for libraries and museums. Additionally, the Federal contribution to education through tax expenditures is not reflected in this table. Because of rounding, details may not add to totals.

available to delimetal the sources of revenues for private schools.

NOTE.—Estimated axpenditures by source of funds derived from data collected on revenue sources. Federally supported student sid that goes to higher education institutions through students' tuition payments is shown under "All other" rather than "Federal." Such payments would add substantial amounts and several percentage points to the Federal share. For example, approximately 66.8 billion was spent on 1,...notal aid through students in 1883-84, which amounts to about 3 percent. total education expenditures

### Chapter II

# **Elementary and Secondary Education**

Growing concern about the quality of education in elementary and secondary schools has prompted careful examinations of student learning experiences. Results from a number of achievement tests have highlighted the poor performance of students in mathematics, reading, and writing. Moreover, minority students have scored much lower than the average in these important skills. The evaluation of these issues has caused increased information needs that are only partially met by available data.

The Center for Education Statistics has developed a new plan to expand the coverage of its elementary and secondary statistical program. This new survey system will provide more information on finances of elementary and secondary schools and will allow cross comparisons of teacher, student, and school characteristics. For example, the linking of student performance with teacher and school characteristics may enable a systematic study of successful school environments.

This chapter contains a variety of statistics on public and private elementary and secondary education. These data are derived from surveys conducted by the Center and by other public and private organizations.

The Center conducts annual surveys of public school statistics and periodic surveys of teacher characteristics and private schools. The "Common Core of Data" survey is a survey of public school administrative records available from State education agencies. Each State provides summary data on enrollment, staff, revenues, and expenditures. In addition, listings and selected statistics of school districts and schools are obtained. National and State summary statistics from the "Common Core of Data" have been published annually in the Digest and in a series of reports and bulletins.

For many years the Center published comprehensive statistics on the organization, staff, pupils, and finances of public schools in the biennial report, *Statistics of State School Systems*. This publication was discontinued after 1975-76, but it is still cited in many of the historical tables in this chapter.

The Center has also conducted periodic surveys of private elementary and secondary schools for many years. Summary statistics on enrollments, teachers, graduates, and schools were collected in the "1983-84 Survey of Private Schools." Some preliminary data from the 1985-86 survey are also included in this report. Additional information on private schools has been made available by the National Catholic Educational Association.

Other recurring reports of the Center which have appeared from time to time are the studies of preprimary education and of offerings and enrollments in high school subjects. The most recent statistics in these areas are summarized in the tables which follow.

This chapter of the *Digest* also utilizes data from the National Assessment of Educational Progress on student achievement; from the Office for Civil Rights, U.S. Department of Education, on public school enrollment by race or ethnicity; from the National Education Association on the characteristics, subjects taught, and average salaries of public school teachers; from the Education Commission of the States on mandatory ages of attendance, graduation requirements, and minimum-competency testing for students and teachers; and from the College Entrance Examination Board on the Scholastic Aptitude Test scores of college-bound high school seniors.

Additional information on public school libraries and use of microcomputers in public and private schools is tabulated in chapter VII of this report. Comparisons of the income and employment of high school graduates and dropouts are in chapter V, and tabulations of international data are in chapter VI. Further information on survey methodologies can be found in the Guide to Sources.

# **Highlights**

- In the fall of 1985, public elementary and secondary school enrollments increased for the first time since 1971. (Tables 2 and 29)
- In contrast to the declining elementary and secondary school enrollments during the

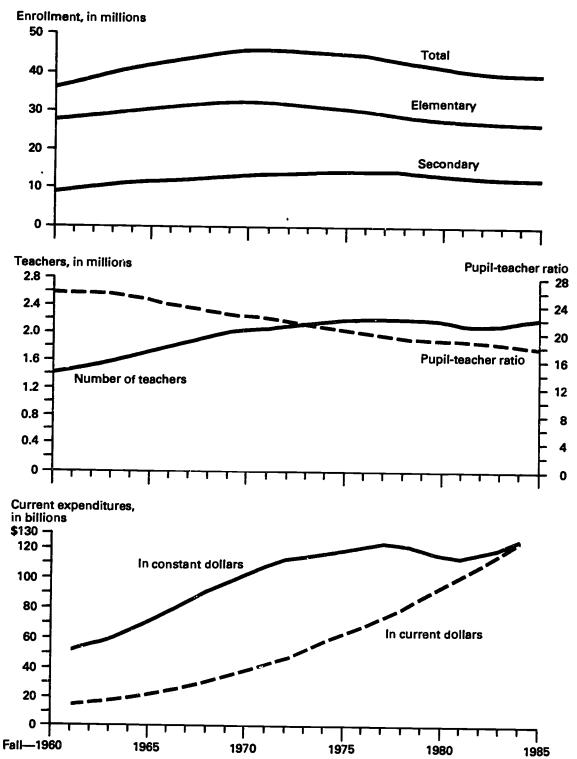

1970's and early 1980's, there was substantial enrollment growth in preprimary education. Between 1970 and 1980, preprimary enrollment rose by 19 percent. From 1980 to 1985, preprimary enrollment increased another 20 percent. Another important aspect of the increasing participation of young children in preprimary schools is the rising proportion in full-day programs. In 1985 about 37 percent of the children attended school all day compared to 17 percent in 1970. (Table 37)

- e Despite drops in enrellment during the significant properties of children were served in programs for the handicapped. In 1976-77, about 8 percent of children were served in programs for the handicapped compared to 11 percent in 1984-85. Most of this increase may be attributed to the proportion of children who were identified as learning disabled, which rose from 2 percent of all children in 1976-77 to 5 percent of all children in 1984-85. (Table 38)
- Of the 404,000 full-time and part-time private school teachers in 1985-86, about 76 percent were women. About 62 percent of the teachers were under age 40. Ninety-five percent of the private school teachers had a bachelor's degree or above. (Table 43)
- About one-third of all private schools had a basic tuition (excluding discounts) of more than \$1,500 in 1985-86. There was considerable variation in the charges by different types of schools. Catholic schools tended to charge the least with 12 percent over \$1,500. Schools with no religious orientation charged the most with 80 percent charging over \$1,500 per year. (Table 44)
- While public school enrollments were decreasing during the 1970's and early 1980's, the number of teachers was generally rising. In consequence, the pupil-teacher ratio declined markedly. Between 1970 and 1985, the pupil-teacher ratio for public schools fell from 22 to 18. (Table 46)
- The average salary for teachers has grown rapidly in recent years, reaching \$25,313 in 1985-86. After adjustment for inflation,

- teacher's salaries rose 14 percent between 1980-81 and 1985-86, secouping much of the loss in purchasing power suffered during the 1970's. (Table 51)
- Comparisons of the number of high school graduates and the 17-year-old population suggest that an increasing proportion of young people are graduating from high school. In 1968-69, there were 77 graduates for every 100 persons 17 years of age. This ratio generally declined throughout the 1970's, falling to a low point of 71 percent in 1979-80. Since 1980, the graduation ratio has been rising, reaching 75 percent in 1984-85. (Table 69)
- Students at ages 9, 13, and 17 were reading better in 1984 than they were in 1971. The improvements in the achievement of minority and disadvantaged urban students between 1971 and 1984 have reduced the gap between their performance and that of other students. However, the average reading proficiency of black and Hispanic 17-year-olds is only slightly higher than that of white 13year-olds. (Tables 73 and 74)
- The proportion of high school seniors who had ever used an illicit drug rose from 55 percent in 1975 to a high point of 66 percent in 1981. After 1981, the proportion of seniors who had ever used drugs fell. In 1985, about 61 percent of students said they had used illicit drugs, including 17 percent who had used cocaine. (Table 87)
- States are the most important funding source for public elementary and secondary schools. In 1984-85, 49 percent of all revenues came from State sources, 45 percent came from local sources, and 6 percent came from the Federal Government. (Table 93)
- The expenditure per student in public schools has risen significantly in recent years, even after allowing for inflation. In 1984-85, the average current expenditure per student in average daily attendance was \$3,449. This represents an increase of 14 percent since 1980-81, after adjustment for inflation. (Table 98)

<sup>\*</sup>Data on population and labor force are from the Bureau of the Census, and data on personal income and national income are from the Bureau of Economic Analysis, U.S. Department of Commerce.

<sup>&</sup>lt;sup>2</sup>Fall enrollment.

<sup>&</sup>lt;sup>3</sup>Data for 1870-71.

<sup>\*</sup>Estimated by the Center for Education Statistics.

<sup>\*</sup>Prior to 1919-20, data are for the number of different persons employed rather than number of positions.

<sup>\*</sup>Because of the modification of the scope of "current expenditures for elementary and secondary schools," data for 1959-80 and later years are not entirely comparable with prior years.

<sup>\*</sup>Includes euromer schools, community colleges, and adult aducation. Beginning in 1959-60, also includes community services, formerly classified with "nurrent expenditures for elementary and secondary schools."

<sup>\*</sup>Excludes community colleges and adult education.

<sup>\*</sup>Includes supervisors, principals, teachers, and other nonsupervisory instructional staff.

<sup>10</sup> Estimated by the National Education Association.

Excludes current expenditures not allocable to pupil costs.

<sup>13&</sup>quot;A.D.A." means everage daily attendance in elementary and secondary schools.

<sup>13</sup>Includes interest on achool debt.

<sup>14</sup>The expenditure figure used here is the sum of current expenditures allocable to pupil costs, capital outlay, and interest on school debt.

<sup>&</sup>lt;sup>15</sup>Per-day rates derived by dividing —nual rates by average length of term.

<sup>···</sup> Data not reported.

NOTE.—Kindergerten enrollment includes a relatively small number of nursery school pupils. Because of rounding, details may not add to totals.

<sup>&</sup>lt;sup>1</sup>Data have been revised from previously published figures.

<sup>&</sup>lt;sup>2</sup>Includes a relatively small number of prekindergarten pupils.

Includes a reservery small number or presented pupils.

Figures are shown in normal progression, indicate envolument in successive grades of the pupils who entered the first grade in fall 1970, including retarded and accelerated pupils. Because of retardation, achool retention rates should not be calculated directly from first-grade enrollment.

<sup>4</sup>Included in "elementary ungraded."

<sup>\*</sup>Included in "secondary ungraded."

<sup>\*</sup>Less than 0.05 percent.

NOTE.—Because of rounding, details may not add to totals.

<sup>\*</sup>Table (1) on includes full-time and part-time teachers.

NOTE.—Data are based on a sample survey and may not be strictly comparable with data reported elsewhere. Elementary schools have no grade higher than 8. Secondary schools have no grade lower than 7. Combined schools have any other grade apans. Other schools include special education, alternative, and vocational schools. Includes only schools which offer first grade or above. Because of rounding, details may not add to totals.

SOURCE: U.S. Department of Education, Center for Educational Statistics, "1985-88 Private School Survey." (This table was prepared October 1986.)

<sup>&</sup>lt;sup>2</sup>Includes schools with a religious orientation or religious affiliation.

<sup>&</sup>lt;sup>3</sup>Avorage salary of full-time teachers only.

Includes base salary, additional compensation for additional duties, summer school salary, and nonschool-related income.

<sup>---</sup> Data not available.

¹Estimated.

<sup>&</sup>lt;sup>2</sup>Preliminary.

³Projected.

<sup>---</sup> Data not available.

NOTE.—Date for teachwis are expressed in full-time equivalents. Distribution of unclassified teachwis by level in estimated. Distribution of elementary and secondary school teachers by level is determined by reporting units. Kinder-

garten includes a relatively small number of nursery school trachers and students. Because of rounding, details may not add to totals.

<sup>&</sup>lt;sup>1</sup>Derived from *Current Population Raports*, Series P-25 of the Bureau of the Census, U.S. Department of Commerce.

<sup>&</sup>lt;sup>2</sup>Includes graduates of public and private schools.

<sup>&</sup>lt;sup>3</sup>Data for 1929-30 and preceding years are from Statistics of Public High Schools and exclude graduates of high schools which failed to report to the Office of Education.

<sup>&</sup>lt;sup>4</sup>For most years, private school data have been estimated based on periodic private school surveys. For years through 1957-58, private includes data for aubcollegiate departments of inatitutions of higher education, residential schools for exceptional children, and Federal schools.

<sup>&</sup>lt;sup>5</sup>Data have been revised from previously published figures.

<sup>&</sup>lt;sup>6</sup>Preliminary data. --- Data not available.

NOTE.—Includes graduates of regular day school programs. Excludes graduates of other programs, when separately reported, and recipients of high school equivalency certificates. Some of the figures have been revised slightly since originally published.

slightly since originally published.

ed from previously published data.

ning in 1983-84 graduates from adult programs are excluded. estimated by the Center for Education Statistics.

Data include graduates of regular day school programs, but exclude graduates in programs and persons receiving high school equivalency certificates. They

also exclude graduates of subcollegiate departments of institutions of higher educa-tion. Federel schools for Indians and on Federal installations, and residential schools for exceptional children. Some figures have been revised since originally published. <sup>&</sup>lt;sup>1</sup>All participants of this age were in school.

<sup>&</sup>lt;sup>2</sup>The 4 items for the scale were: (1) newspaper subscription; (2) magazine subscription; (3) more than 25 books in home; and (4) encyclopedia at home.

<sup>&</sup>lt;sup>3</sup>Students in this group attend schools in communities with a population under 10,000 where most of the residents are farmers or farm workers.

<sup>4</sup>Students in this group attend schools in or around cities with a population greater than 200,000 where a high proportion of the residents are on welfere or are not regularly employed.

Students in this group attend schools in or around cities with a population greater than 200,000 where a high proportion of the residents are in profes-sional or managerial positions.

<sup>···</sup> Data not available.

NOTE.—The NAEP scores have been evaluated at certain performance levels. A score of 300 (adept) implies an ability to find, understand, summarize, and explain relatively complicated literary and informational material. A score of 250 (intermediate) implies an ability to search for specific information, interrelate ideas, and make generalizations about literature, science, and social studies materials. A score of 200 (basic) implies an ability to understand, combine ideas, and make inferences based on short uncomplicated passages about specific or sequentially related information. A score of 150 implies an ability to follow written directions and select phrases to describe pictures.

 $<sup>^{\</sup>rm t}$  Able to follow brief written directions and select phrases to describe pictures.

<sup>&</sup>lt;sup>2</sup>Able to understand combined ideas and make references based on short uncomplicated passages about specific or sequentially related information.

<sup>&</sup>lt;sup>3</sup>Able to search for specific information, interrelate ideas, and make generalizations about literature, science, and social studies materials.

<sup>&</sup>lt;sup>4</sup>Able fo find, understand, summarize, and explain relatively complicated literary and informational material.

<sup>&</sup>lt;sup>5</sup>Able to understand the links between ideas even when those links are not explicitly stated and to make appropriate generalizations even when the texts lack clear introductions or explanations.

<sup>&</sup>lt;sup>6</sup>Includes Hispanic

<sup>---</sup> Data not available.

<sup>&</sup>lt;sup>1</sup>Cumulative grade point averages were calculated by the Center for Educa-tion Statistics from high school transcripts collected for a "High School and Beyond" subsampts. The average is based on a scale where an "A" is 4.00; a "B" is 3.00; a "C" is 2.00; a "D" is 1.00; and an "F" is 0.

· · .

Socioeconomic status (SES) was measured by a composite scora based on parental education, family income, father's occupation, and household charac-teristics. Three SES categories were formed: low (bottom quartile); medium (middle two quartiles); and high (top quartile).

<sup>&</sup>lt;sup>3</sup>Schools were divided by size based on fall 1981 grade 12 enrollments reported by schools: small (200 or fewer students): medium (201 to 500 students); and large (more than 500 students). SOURCE: U.S. Department of Education, Canter for Education Statistics, "Extracurricular Activity Participants Outperform Other Students." (This table was prepared October 1988.)

1983 legislation calls for Arizona to develop a minimum course of study and criteria for high school graduation standards and for grade-to- grade promotion. Local school districts are to implement standards.

Local scribol bispricts are to implement statusers.

In Connecticut, a new program of stata testing for grade 4 will begin in 10/85 and be expanded to grades 6 and 9 in 10/85. The testing is the State Criterion-Referenced Mestery Program. The 9th grade State proficiency test, begun in 1980, will be administered for the final time in 1986.

<sup>3</sup>Effective 8/85, third grade students must demonstrate acceptable performance on criterion-referenced tests in math and reading before promotion to the fourth grade. Beginning in 1988-89 school year, students must pass school readiness test to be eligible for first grade.

<sup>4</sup>In Haweii, students have three options; paper end pencil test; performance test; or course. First time taken (Grade 9) must be paper and pencil test.

<sup>6</sup>The Kansas Minimum Competency Assessment (MCA) was reestablished by 1984 legislative action (SB 473). The MCA will be in effect for 5 school years, 1984-85 through 1988-89.

\*Kentucky 1984 legislation requires the State superintendent to recommend process of using test results for promotion and graduation to the 1986 legislature.

<sup>7</sup>Louisiana will add grade 8 beginning with 1986-87 school year.

<sup>a</sup>Although first class assessed will graduate in 1987, the first class required to pass for graduation will be the class of 1989.

New Hampshire requires students be tested in elementary, middle, and high school. Some local districts test at grades other than 4, 8, and 12.

<sup>19</sup>In North Csrolins, grades 3, 6, and 8 are given an annual standardized achievement test. Local school districts use the results as a diagnostic tool.

"Locally-based tests in the areas of English composition, math, and reading are required at least only in grades 1-4. Test in grades 5-8 and 9-11 will be implemented no later than 1989-90.

ราคับ เปิดสาราช เกมเลียงเหลือน สามัย ให้กระบ<mark>ามให้เหล</mark>ะเกิด เกมโดย เมื่อ

<sup>12</sup>Test was given in Oklahoma during the 1978-79 school year. There has been no followup to the program. However, a plan for statewide testing was submitted for legislative action January 1985.

13The South Carolina Education Improvement Act of 1984 specifies that the 11th grade test being used to gather baseline data will be replaced in 1985-86 school year-with an exit exam in the 10th grade. All students graduating in 1990 and after must pass the exam.

<sup>14</sup>Local districts use the State-designated tests at grades 3, 6, 8 for remediation and to advise on grade retention. The Tennessee high school test, first taken at grade 9, is required for graduation.

\*\*Texas HB 72 (6/84) mandates the new testing program. New requirements became effective in 1985-86 school year.

<sup>11</sup>Vermont Basic Competency Program requires students to master the basics before they complete 8th grade.

NOTE.—Some States have dates for assessing the first high school graduating class but do not expect to use the results to determine whether students will

## Chapter III

## **Postsecondary Education**

A salient characteristic of postsecondary education in this country is its diversity. American colleges and universities offer a wide range of programs. For example, a junior college usually offers only the first 2 years of training at the college level, but a university normally offers a full undergraduate course leading to a bachelor's degree as well as firstprofessional and graduate programs leading to advanced degrees. Vocational and technical institutions offer training programs which are designed to prepare students for specific careers. Other types of postsecondary education providers, such as community groups, churches, and businesses, offer learning opportunites to adults. This variety of institutions serves a wide range of individual needs but poses many problems of coverage and definitions for researchers.

In recent decades, postsecondary education has become more accessible to all segments of the population. The growth of public junior colleges and low-cost institutions means that the expenses of the students attending these institutions can be held to a minimum. Federal and other programs also have attracted many students to higher education who otherwise would have found it difficult to finance a college education. However, in recent years, student charges at colleges and universities have risen rapidly. This issue becomes more of a concern when viewed in the light of the declining traditional-college-age population. This demographic change will have a considerable impact on the enrollment profiles and financial postures of many institutions.

The Center for Education Statistics collects annual statistics on institutions of higher education to address these problems and other concerns about colleges and universities. The "Higher Education General Information Survey" (HEGIS) obtains data from each college and university on its enrollment, faculty and faculty salaries, degrees conferred, and finances, including revenues, expenditures, and property. Some of these data have been published in the annual reports Education

Directory: Colleges and Universities and Fall Enrollment in Colleges and Universities. Other specialized reports on degrees conferred. faculty salaries, and revenues and expenditures have been issued from time to time. This chapter provides an overview of the latest statistics from the HEGIS surveys. It also provides historical data that enable the reader to observe long-range trends in American higher education. In addition, it presents summary data from the Bureau of the Census on the characteristics and the majors of college students and from the Equal Employment Opportunity Commission on the race/ethnicity, academic rank, and sex of college faculty members.

The Center is undertaking a major expansion in data collection at the postsecondary level in a survey called "Integrated Postsecondary Education Data Survey." This new study will provide a comprehensive overview of postsecondary education for the first time by incorporating a survey system with a consistent set of definitions and survey forms for all types of postsecondary institutions. This new data set will be featured in future editions of the *Digest* and other Center publications.

In this edition of the *Digest* the vocational and technical school data are derived from several surveys conducted in the past. In addition, new 1984 data from the triennial survey "Participation in Adult Education" compares information on adult learning activities, by demographic characteristics of participants. Information on employment outcomes for college graduates can be found in chapter V. Chapter VII contains data on college libraries. Further information on survey methodologies can be found in the Guide to Sources.

## **Highlights**

College enrollment increased more than 40 percent between 1970 and 1980. Since 1980, enrollments have risen more slowly. Between 1980 and 1985, enrollment increased only about 1 percent from 12.1 mil-

lion to 12.2 million. All of this growth was in part-time enrollment. Between 1980 and 1985, the number of men enrolled fell by about 1 percent, while the number of women increased by 3 percent. Contrary to trends in the 1970's, enrollment in the 1980's has risen faster at private institutions than at public institutions. (Table 101)

- The number of older students has been growing more rapidly than the number of younger students. Between 1970 and 1985, the enrollment of students under age 25 increased by 15 percent. During the same period, enrollment of persons 25 and over rose by 114 percent. In the later part of this period from 1980 to 1985, enrollments of students under 25 decreased by 5 percent, while the enrollment of persons 25 and over increased by 12 percent. (Table 103)
- Recent years have seen divergent enrollment trends at the undergraduate, graduate, and first-professional levels. Undergraduate enrollment increased rapidly during the 1970's, but it has been falling since 1983. The number of first-time freshmen declined from a peak of 2.6 million in 1981 to 2.3 million in 1985. Graduate enrollment has been steady at 1.3 million since the late 1970's, rising slightly to 1.4 million in 1985. Enroilment in first-professional programs has shown only small fluctuations from the current 0.3 million figure since the late 1970's. (Tables 109-112)
- The proportion of college students comprising minorities rose between 1976 and 1984. In 1976, 15.4 percent were minorities compared to 17.0 percent in 1984. Much of the change can be attributed to sharply rising numbers of Asian students. However, the proportion of black students fell from 9.4 percent in 1976 to 8.8 percent in 1984. The drop in the proportion of black students reflected the declining enrollments of black males. (Tables 130 and 131)
- College faculty members generally suffered losses in the purchasing power of their salaries from 1972-73 to 1980-81. While they have recouped some of these losses in the past 5 years, their salaries in constant dollars in 1985-86 were still below those in 1972-73. (Table 139)

The State of the Book of the

- The proportion of faculty with tenure has remained relatively stable in recent years. In 1980-81, 65 percent of the full-time faculty had tenure compared to 66 percent in 1985-86. A large discrepancy remained between the proportions of men and women with tenure. Seventy-one percent of men compared to 52 percent of women had tenure in 1985-86. (Table 142)
- Despite the sizable numbers of small colleges, most students attend the larger colleges. In fall 1985, 38 percent of higher education institutions had fewer than 1,000 students. However, these small institutions enrolled less than 5 pyrcent of total college enrollment. Even though only 10 percent of the colleges enrolled over 10,000 students, these large institutions accounted for 50 percent of total college enrollment. (Table 145)
- Although the total number of bachelor's degrees did not fluctuate widely between 1974-75 and 1984-85, there were significant changes for men and women. During that 10-year period, the number of bachelor's degrees awarded to men fell by 4 percent, while the number of degrees awarded to women rose by 19 percent. (Table 150)
- Of the 979,000 bachelor's degrees conferred in 1984-85, the largest numbers of degrees were conferred in the fields of business and management (233,000), engineering and engineering technologies (96,000), social sciences (91,000), education (88,000), and health professions (65,000). At the master's degree level, the largest numbers were conferred in education (76,000) and business and management (68,000). The largest numbers at the doctor's degree level were in education (7,200), life sciences (3,400), physical sciences (3,400), and engineering (3,200). (Tables 154-156)
- There have been rapid rises in the number of bachelor's degrees conferred in occupational areas and large decreases in the number of degrees conferred in the traditional liberal arts. From 1974-75 to 1984-85, the number of bachelor's degrees conferred in business and management rose by 75 percent. The number of degrees in computer and information services jumped by 672 percent. Other large increases occurred in the fields of engineering and engineering technologies

(105 percent) and health professions (32 percent). One exception to the trend of increasing numbers of degrees in occupational areas has been the drop of 47 percent in education. Large drops have been noted in the number of bachelor's degrees conferred in letters (-30 percent), social sciences (-32 percent), and foreign languages (-43 percent). (Table 154)

 For the 1985-86 academic year, annual undergraduate charges for tuition, room, and board are estimated at \$3,640 at public colleges and \$8,870 at private colleges. Since 1975-76, charges at public colleges have risen by 118 percent and charges at private colleges by 142 percent. These increases surpassed the rise in the Consumer Price

Index, which was about 96 percent during the same 10-year period. (Tables 193 and 27)

- Trend data show continuing increases in higher education expenditures. After adjustment for inflation, current-fund expenditures rose about 23 percent between 1974-75 and 1984-85. Expenditures increased more quickly at private institutions (31 percent) than at public institutions (19 percent). (Table 205)
- Endowments of colleges and universities have risen rapidly in recent years. Between 1979-80 and 1984-85, the market value of endowments rose by 92 percent, from \$20.7 billion to \$39.9 billion. (Table 215)

<sup>&#</sup>x27;These institutions have a significant level of ectivity in doctoral-level These institutions have a significant level of ectivity in doctoral-level education as measured by the number of doctorel recipients and the diversity in doctoral-level program offerings.

These institutions have diverse postbaccataureate programs but do not engage in significant doctoral-level education.

These institutions primarily emphasize general undergraduate education. These baccataureate or postbaccataureate institutions ere characterized by an emphasis in one field of study, such as business or engineering. These institutions confer at least 75 percent of their degrees and awards below the bachelor's degree level.

These institutions are new additions to the Higher Education General Information Survey universe (not necessarily newly organized). When degree and award data become available, they will be reclassified. "Large percentage increase is due primarily to the addition of colleges accredited by the National Association of Trade and Technical Schools in

accreated by the National Association of Trade and Technical Schools in 1980 and 1981.

SCURCE: U.S. Oppertment of Education, Center for Education Statistics, "Residence and Migration of College Students, Fall 1984" survey. (This table was prepared September 1986.)

<sup>\*</sup>New students are those students who are enrolled at the reporting institution for the first time et each of the following levels: undergraduate, graduate, first-professional, or unclassified.

\*\*Students enrolled in State\* are all of the new students reported by the institution attended; i.e., ell immigrants and "remaining" students (includes foreign students).

foreign students).

2"Student residents of State' are all students from a State in which they were residing when fire admitted to the reporting institution at the current

<sup>4&</sup>quot;Students remaining in State" are students who attend institutions in

their home State.

The inmigration exceeds the outmigration by the number of students enrolled from outside the United States.

NOTE.—Oata for U.S. Service  $\mathfrak{t} \in \mathcal{L}$  as are included in State totals.

Table 125.—Selected statistics for the 100 college and university campuses enrolling

Data not available.

NOTE.—Deta are based upon sample surveys of the civilian non-institutional population. Because of rounding, percents may not add to 100.0.

<sup>&</sup>lt;sup>1</sup>Some 214 institutions did not report the racial/ethnic status of their student body. Data for 195 of these nonreporting institutions. representing about 5 percent of total enrollment, were imputed. For those institutions which reported race data in 1982, data have been estimated by applying their 1982 race distribution to their total enrollment reported in 1984.

NOTE.—Because of underreporting and nonreporting of racial/ ethnic data, totals in this table may be slightly smaller than totals appearing in other tables. Because of rounding, details may not add to totals.

<sup>\*</sup>Some 21A institutions did not report the racie\*/ethnic status of their student body. Data for 196 of these nonreporting institutions, representing about 5 percent of total enrollment, were imputed. For those institutions which reported race data in 1962, data have been estimated by applying their 1982 race distribution to their total enrollment reported i., 1984.

NOTE.—Because of underreporting and nonreporting of racial/ethnic data, totals in this table may be slightly smaller then totals appearing in other tables. Because of rounding, details may not add to totals.

which reported race data in 1982, data have been estimated by applying their 1982 race distribution to their total enrollment reported in 1984. States with estimates amounting to more than 5 percent of their total have been noted. Because of underreporting and nonreporting of racial/ethnic data, totals in this table may be slightly lower than totals appearing in other tables.

tables.

SOURCE: U.S. Department of Education. Canter for Education Statistics. "Fall Enrollment in Colleges and Universities" surveys; and unpublished tabulations. (This table was prepared September 1986).

<sup>Percent minority based on U.S. citizen enrollment (total enrollment less enrollment of nonresident aliens).

JApproximately 11 percent of total is based on 1982 distribution by race.

Approximately 19 percent of total is based on 1982 distribution by race.

Distribution by race is based largely on 1982 data. Only 15 percent of the students were reported by race in 1984.

NOTE—Some 214 institutions did not report the racial/sthnic status of their student body. Data for 195 of these nonreporting institutions, representing about 5 percent of total enrollment, were imputed. For those institutions</sup>

¹These institutions have a significant level of activity in doctoral-level education as measured by the number of doctoral recipients and the diversity in doctoral-level program offarings.

²These institutions have diverse postbaccalaureate programs, but do not engage in significant doctoral-level education.

MAS

<sup>&</sup>lt;sup>3</sup>These institutions primarily emphasize general undergraduate education. <sup>4</sup>These baccalauraste or postbaccalauraste institutions are characterized by an emphasis in one field of study, such as business or angineering.

<sup>&</sup>lt;sup>5</sup>These institutions confer at less 75 percent of their degrees and awards below the bachelor's degree level.

<sup>\*</sup>These institutions are new additions to the Higher Education General Information Survey universe (not necessarily newly organized). When degree and award data become available, they will be reclassified.

NOTE.—Although a strenuous effort has been made to provide a consistent series of data, minor changes have occurred over time in the way degrees are classified and reported. Any degrees classified in early surveys as first-professional "era included above with bachalor's degrees; any degrees classified as "second-professional" or "second-level" are included with

master's degrees. Data for all years are for 50 States and the District of Columbia.

NOTE.—Although a stranuous effort has been made to provide a consistent series of data, minor changes have occurred over time in the way degrees are classified and reported. Any degrees classified in early surveys as "lirst-professional" are included above with bachelor's degrees; any degrees classified as "second-professional" or "second-level" are included with

master's degrees. Data for all years are for 50 States and the District of Columbia.

<sup>1</sup>Excludes degrees in public administration and international relations.

NOTE.—Although a stranuous effort has been made to provide a consistent series of data, minor changes have occurred over time in the way degrees are classified and reported. Any degrees classified in early surveys as "first-professional" are included above with bechelor's degrees; any degrees classified as "second-professional" or "second-level" are included with mas-

ter's degrees. Date for all years are for 50 States and the District of Columbia.

<sup>\*</sup>Includes Ph.O., Ed.D., and comperable degrees at the doctoral level. Excludes first-professional degrees, such as M.D., 0.0.S., and 0.V.M. \*Includes 311 degrees in computer sciences and 36 degrees in other or unspecified fields not shown separately.

<sup>\*</sup>Less than 0.05 percent.

<sup>&</sup>quot;Within the raciel/ethnic category, mathematics is included under physical sciences.

<sup>\*</sup>Within the racial/ethnic category, business is included under other professional fields.

NOTE.—The above classification of degrees by field differs somewhat from that in most publications of the Center for Education Statistics. The major differences are that history is included under humanities rather than social sciences and that psychology is included under social sciences. The number of degrees also differs slightly from that reported in the CES "Degrees and Other Formal Awards Conferred" survey. Because of rounding, percents may not add to 100.0.

<sup>1</sup> Either delayed entry for this year or began attending part-time.

<sup>&</sup>lt;sup>2</sup>Entered this year full-time, but either dropped out or began attending part-time.

<sup>&</sup>lt;sup>3</sup>Persisted in a proprietary or private technical school, 2-year college, or a public technical school for 15 or more months.

<sup>&</sup>lt;sup>4</sup>Persisted full-time in postsecondary institutions through 1983 and enrolled full-time in a 4-year college in the 1983-84 academic year. Although these students persisted at least 6 months into their fourth year, their rate of degree completion is unknown.

<sup>\*</sup>Socioeconomic status (SES) was measured by a composite score on parental education, family income, father's occupation, and household characteristics.

<sup>---</sup> Not applicable.

Estimated.

267

NOTE.—Data are for the entire academic year and are average charges paid by students. Tuition and fees were calculated on the basis of full-time-equivalent students but are not adjusted to reflect student residency. Room and board were based on full-time students. The data have not been adjusted for changes in purchasing power of the dollar.

SOURCES: U.S. Department of Education, Center for Education Statistics, Projections of Education Statistics; and "Institutional Characteristics of Colleges and Universities" and "Fall Enrollment in Colleges and Universities" surveys. (This table was prepared September 1985.)

<sup>&</sup>lt;sup>2</sup>Data have been revised since originally published.

Annual income of less than \$12,000.

NOTE.—This tabulation includes all forms of financial aid: Federal, State, local, institutional, and private. Data are based upon a sample survey of high school seniors in 1980 who were enrolled in postsecondary education institutions during the

academic year 1981-82. Because of the size of the sample, students in private 2-year colleges are not shown separately, but they are included in the totals. Because of rounding, percentages may not add across to 100.

SOURCE: U.S. Department of Education, Center for Education Statistics, "High School and Beyond" survey. (This table was prepared January 1986.)

<sup>&</sup>lt;sup>2</sup>Annual income between \$12,000 and \$24,999.

<sup>&</sup>lt;sup>3</sup>Annual income of \$25,000 or more.

<sup>\*</sup>Used parental finances.

Persons 17 years of age and over on the date of the survey.

Osts are for the year ending in May 1984.

On the date of the survey. Includes part-time undergraduate and graduate students who indicated that they were also adult education participants.

NOTE.—Oats are based upon a sample survey of the civilian noninstitutional population. Because of rounding, details may not add to totals.

The total number of adult education courses taken between May 1983 and May 1984 was 43,192,000. However, only 40,752,000 course descriptions were obtained through the survey, which esked for information on up to 4 courses (the most recent courses if more than 4 courses were taken during the year). Five percent of participants took more than 4 courses during the year.

NOTE.—Because of rounding, details may not add to totals.

## **Chapter IV**

# Federal Programs for Education and Related Activities

Grants of public lands for maintenance of the public schools were authorized by the Congress of the Confederation in 1785. In 1787, Federal land was granted for education under the Northwest Ordinance when the U.S. Government entered into a contract to sell a large tract of land in Ohio, reserving for schools a section of each township involved in the sale. Additional land was reserved for a university. From this modest beginning emerged the current complex pattern of Federal education support.

Federal support for education is not the result of a single unified national plan. Rather, the national effort is a collection of programs and procedures, each individually enacted into law to mitigate or eliminate a perceived national problem or need. This chapter summarizes the Federal funds for these programs, providing an indication of the magnitude and variety of the Federal fiscal effort.

Data in this chapter reflect outlays and obligations of Federal agencies. These tabulations differ from Federal receipts reported in other chapters because of numerous variations in the data collection systems. Federal appropriations are not necessarily spent by recipient institutions in the same year they are appropriated. In some cases, institutions cannot identify the source of Federal revenues because the revenues flow through State agencies. Some types of revenues, such as tuition and fees, are reported as revenues from students even though they may be supported by Federal student loan programs. Some institutions that receive Federal education funds are not included in regular surveys conducted by the Center. Thus, the revenue data tabulated in this chapter are not comparable to figures reported in other chapters.

A capsule view of the history of Federal education activities is provided in the following list of selected legislation.

1787 Northwest Ordinance authorized land

- grants for the establishment of educational institutions.
- 1802 An act fixing the military peace establishment of the United States established the U.S. Military Academy. (The U.S. Naval Academy was established in 1845 by the Secretary of the Navy.)
- 1862 First Morrill Act authorized public land grants to the States for the establishment and maintenance of agricultural and mechanical colleges.
- 1867 Department of Education Act authorized the establishment of the Department of Education.\*
- 1876 Appropriation Act, Department of the Treasury established the U.S. Coast Guard Academy.
- 1890 Second Morrill Act provided for money grants for support of instruction in the agricultural and mechanical colleges.
- 1911 State Marine School Act authorized Federal funds to be used for the benefit of any nautical school in any of 11 specified State seaport cities.
- 1917 Smith-Hughes Act provided for grants to States for support of vocational education.
- 1918 Vocational Rehabilitation Act provided for grants for rehabilitation through training of World War I veterans.
- 1919 An act to provide for further educational facilities authorized the sale by the Federal Government of surplus machine tools to educational institutions at 15 percent of acquisition cost.

306

<sup>\*</sup>The Department of Education as established in 1867 was later to be known as the Office of Education until 1980, when, under Public Law 96-88, it was again designated as a "department." For consistency, it is referred to as the Department of Education even in those tables covering years when it was officially the Office of Education.

- 1920 Smith-Bankhead Act authorized grants to States for vocational rehabilitation programs.
- 1935 **Bankhead-Jones Act** (Public Law 74-182) authorized grants to States for agricultural experiment stations.

Agricultural Adjustment Act (Public Law 74-320) authorized 30 percent of the annual customs receipts to be used to encourage the exportation and domestic consumption of agricultural commodities. Commodities purchased under this authorization began to be used in school lunch programs in 1936. The National School Lunch Act of 1946 continued and expanded this assistance.

- 1936 An act to further the development and maintenance of an adequate and well balanced American Merchant Marine (Public Law 74-415) established the U.S. Merchant Marine Academy.
- 1937 National Cancer Institute Act established the Public Health Service fellowship program.
- 1941 Amendment to Lanham Act of 1940 authorized Federal aid for construction, maintenance, and operation of schools in federally impacted areas. Such assistance was continued under Public Law 815 and Public Law 874, 81st Congress, in 1950.
- 1943 Vocational Rehabilitation Act (Public Law 78-16) provided assistance to disabled veterans.

School Lunch Indemnity Plan (Public Law 78-129) provided funds for local lunch food purchases.

1944 Servicemen's Readjustment Act (Public Law 78-346) provided assistance for education of veterans.

Surplus Property Act (Public Law 78-457) authorized transfer of surplus property to educational institutions.

1946 National School Lunch Act (Public Law 79-396) authorized assistance through grants-in-aid and other means to States to assist in providing adequate foods and facilities for the estab-

lishment, maintenance, operation, and expansion of nonprofit school lunch programs.

George-Barden Act (Public Law 79-586) expanded Federal support of vocational education.

- 1948 United States Information and Educational Exchange Act (Public Law 80-402) provided for the interchange of persons, knowledge, and skills between the United States and other countries.
- 1949 Federal Property and Administrative Services Act (Public Law 81-152) provided for donation of surplus property to educational institutions and for other public purposes.
- 1950 Financial assistance for local educational agencies affected by Federal activities (Public Law 81-815 and Public Law 81-874) provided assistance for construction (Public Law 815) and operation (Public Law 874) of schools in federally affected areas.

Housing Act (Public Law 81-475) authorized loans for construction of college housing facilities.

1954 An act for the establishment of the United States Air Force Academy and other purposes (Public Law 83-325) established the U.S. Air Force Academy.

Cooperative Research Act (Public Law 83-531) authorized cooperative arrangements with universities, colleges, and State educational agencies for educational research.

National Advisory Committee on Education Act (Public Law 83-532) established a National Advisory Committee on Education to recommend needed studies of national concern in the field of education and to propose appropriate action indicated by such studies.

School Milk Program Act (Public Law 83-690) provided funds for purchase of milk for school lunch programs.

1956 Library Services Act (Public Law 84-597) authorized grants to States for extension and improvement of rural public library services.

Practical Nurse Training Act (Public Law 84-911) provided grants to States for practical nurse training.

National Defense Education Act (Public Law 85-865) provided assistance to State and local school systems for strengthening instruction in science, mathematics, modern foreign languages, and other critical subjects; improvement of State statistical services; guidance, counseling, and testing services and training institutes; higher education student loans and fellowships; foreign language study and training provided by colleges and universities; experimentation and dissemination of information on more effective utilization of television, motion pictures, and related media for educational purposes; and vocational education for technical occupations necessary to the national defense.

> **Education of Mentally Retarded** Children Act (Public Law 85-926) authorized Federal assistance for training teachers of the handicapped.

> Captioned Films for the Deaf Act (Public Law 85-905) authorized a loan service of captioned films for the deaf.

- Area Redevelopment Act (Public Law 87-27) included provisions for training or retraining of persons in redevelopment areas.
- 1962 Manpower Development and Training Act (Public Law 87-415) provided training in new and improved skills for the unemployed and underemployed.

Communications Act of 1934, Amendment (Public Law 87-447) provided grants for the construction of educational television broadcasting facilities.

Migration and Refugee Assistance Act of 1962 (Public Law 87-510) authorized loans, advances, and grants for education and training of refugees.

Health Professions Educational Assis-1963 tance Act (Public Law 88-129) provided funds to expand teaching facilities and for loans to students in the health professions.

**Vocational Education Act of 1963** (Public Law 88-210) increased Federal support of vocational education schools, vocational work-study programs, and research, training, and demonstrations in vocational education.

Higher Education Facilities Act of 1963 (Public Law 88-204) authorized grants and loans for classrooms, libraries, and laboratories in public community colleges and technical institutes as well as undergraduate and graduate facilities in other institutions of higher education.

1964 Civil Rights Act of 1964 (Public Law 88-352) authorized the Commissioner to arrange for support for institutions of higher education and school districts to provide inservice programs for assisting instructional staff in dealing with problems caused by desegregation.

> Economic Opportunity Act of 1964 (Public Law 88-452) authorized grants for college work-study programs for students from low-income families; established a Job Corps program and authorized support for work-training programs for unemployed youths; provided training and work experience opportunities in welfare programs; authorized support of education and training activities and of community action programs, including Head Start, Follow Through, and Upward Bound; and authorized the establishment of Volunteers in Service to America (VISTA).

1965 Elementary and Secondary Education Act (Public Law 89-10) authorized grants for elementary and secondary school programs for the children of low-income families; school library resources, textbooks, and other instructional materials for school children; supplementary educational centers and services; strengthening State education agencies; and educational research and research training.

> **Health Professions Educational Assist**ance Amendments (Public Law 89-290) authorized scholarships to aid needy students in the health professions.

Higher Education Act of 1965 (Public Law 89-329) provided grants for university community service programs, college library assistance, library training and research, strengthening developing institutions; teacher training programs; and undergraduate instructional equipment. Authorized insured student loans, established a National Teacher Corps, and provided for graduate teacher training fellowships.

Medical Library Assistance Act (Public Law 89-291) provided assistance for construction and improvement of health sciences libraries

National Foundation on the Arts and the Humanities Act (Public Law 89-209) authorized grants and loans for projects in the creative and performing arts and for research, training, and scholarly publications in the humanities.

National Technical Institute for the Deaf Act (Public Law 89-36) provided for the establishment, construction, equipping, and operation of a residential school for postsecondary education and technical training of the deaf.

National Vocational Student Loan Insurance Act (Public Law 89-287) encouraged State and nonprofit private institutions and organizations to establish adequate loan insurance programs to assist students to attend postsecondary business, trade, technical, and other vocational schools.

**Disaster Relief Act** (Public Law 89-313) provided for assistance to local education agencies to help meet exceptional costs resulting from a major disaster.

1966 International Education Act (Public Law 89-698) provided grants to institutions of higher education for the establishment, strengthening, and operation of centers for research and training in international studies and the international aspects of other fields of study.

National Sea Grant College and Program Act (Public Law 89-688) authorized the establishment and operation of sea grant colleges and programs by ini-

tiating and supporting programs of education and reserch in the various fields relating to the development of marine resources.

Adult Education Act (Public Law 89-750) authorized grants to States for the encouragement and expansion of educational programs for adults, including training of teachers of adults and demonstrations in adult education (previously part of Economic Opportunity Act of 1964).

Model Secondary School for the Deaf Act (Public Law 89-694) authorized the establishment and operation, by Gallaudet College, of a model secondary school for the deaf.

Elementary and Secondary Education Amendments of 1966 (Public Law 89-750), in addition to modifying existing programs, authorized grants to assist States in the initiation, expansion, and improvement of programs and projects for the education of handicapped children.

1967 Education Professions Development Act (Public Law 90-35) amended the Higher Education Act of 1965 for the purpose of improving the quality of teaching and to help meet critical shortages of adequately trained educational personnel.

Public Broadcasting Act of 1967 (Public Law 90-129) established a Corporation for Public Broadcasting to: Assume major responsibility in channeling Federal funds to noncommercial radio and television stations, program production groups, and ETV networks; conduct research, demonstration, or training in matters related to noncommercial broadcasting; and award grants for construction of educational radio and television facilities.

1968 Elementary and Secondary Education Amendments of 1967 (Public Law 90-247) modified existing programs and authorized support of: regional centers for education of handicapped children, model centers and services for deafblind children, recruitment of personnel and dissemination of information on education of the handicapped; technical assistance in education to rural areas; support of dropout prevention projects; and support of bilingual education programs.

Handicapped Children's Early Education Assistance Act (Public Law 90-538) authorized preschool and early education programs for handicapped children.

Vocational Education Amendments of 1968 (Public Law 90-576) modified existing programs and provided for a National Advisory Council on Vocational Education and for collection and dissemination of information for programs administered by the Commissioner of Education.

**Higher Education Amendments of** 1968 (Public Law 90-575) authorized new programs to assist disadvantaged college students through special counseling and summer tutorial programs and programs to assist colleges to combine resources of cooperative programs and to expand programs which provide clinical experiences to law students.

1970 Elementary and Secondary Education Assistance Programs, Extension (Public Law 91-230) authorized comprehensive planning and evaluation grants to State and local education agencies and provided for the establishment of a National Commission on School Finance.

> National Commission on Libraries and Information Science Act (Public Law 91-345) established a National Commission on Libraries and Information Science to utilize the Nation's educational resources effectively.

> Office of Education Appropriation Act (Public Law 91-380) provided emergency school assistance to desegregating local education agencies.

> **Environmental Education Act (Public** Law 91-516) established an Office of Environmental Education to: develop curriculum and initiate and maintain environmental education programs at

the elementary-secondary levels; disseminate information; provide training programs for teachers and other educational, public, community, labor, and industrial leaders and employees; provide community education programs; and distribute material dealing with environment and ecology.

Drug Abuse Education Act of 1970 (Public Law 91-527) provided for: development, demonstration, and evaluation of curricula on the problems of drug abuse.

1971 Comprehensive Health Manpower Training Act of 1971 (Public Law 92-257) amended Title VII of the Public Health Service Act, increasing and expanding provisions for health manpower training and training facilities.

> Nurse Training Act of 1971 (Public Law 92-158) amended Title VIII, Nurse Training, of the Public Health Service Act, increasing and expanding provisions for nurse training facilities.

1972 **Drug Abuse Office and Treatment** Act of 1972 (Public Law 92-255) established a Special Action Office for Drug Abuse Prevention to provide overall planning and policy for all Federal drug-abuse prevention functions, a **National Advisory Council for Drug** Abuse Prevention, community assistance grants for community mental health centers for treatment and rehabilitation of persons with drug-abuse problems, and, in December 1974, a National Institute of Drug Abuse.

> Education Amendments of 1972 (Public Law 92-318) established: the **Education Division and the National** Institute of Education; general aid for institutions of higher education; Federal matching grants for State student incentive grants; a National Commission on Financing Postsecondary Education; State Advisory Councils on Community Colleges; a Bureau of Occupational and Adult Education and State grants for the design, establishment, and conduct of postsecondary occupational education; and a bureaulevel Office of Indian Education. Amend

ed current Office of Education programs to increase their effectiveness and better meet special needs. Prohibited sex bias in admission to vocational, professional, and graduate schools and to public institutions of undergraduate higher education.

1973 Older Americans Comprehensive Services Amendment of 1973 (Public Law 93-29) made available to older citizens comprehensive programs of health, education, and social services.

Comprehensive Employment and Training Act of 1973 (Public Law 93-203) provided for opportunities for employment and training to unemployed and underemployed persons. Extended and expanded provisions in the Manpower Development and Training Act of 1962, Title I of the Economic Opportunity Act of 1962, Title I of the Economic Opportunity Act of 1964, and the Emergency Employment Act of 1971 as in effect prior to June 30, 1973.

1974 Educational Amendments of 1974 (Public Law 93-380) provided for the consolidation of certain programs and established a National Center for Education Statistics.

Juvenile Justice and Delinquency Prevention Act of 1974 (Public Law 93-415) provided for technical assistance, staff training, centralized research, and resources to develop and implement programs to keep students in elementary and secondary schools and established, in the Department of Justice, a National Institute for Juvenile Justice and Delinquency Prevention.

1975 Indian Self-Determination and Education Assistance Act (Public Law 93-638) provided for increased participation of Indians in the establishment and conduct of their education programs and services.

Harry S Truman Memorial Scholarship Act (Public Law 93-642) established the Harry S Truman Scholarship Foundation and created a perpetual education scholarship fund for young Americans to prepare and pursue careers in public service.

Indochina Migration and Refugee Assistance Act of 1975 (Public Law 94-23) authorized funds to be used for education and training of aliens who have fled from Cambodia or Vietnam.

Education of the Handicapped Act (Public Law 94-142) provided that all handicapped children have available to them a free appropriate education designed to meet their unique needs.

1976 Educational Broadcasting Facilities and Telecommunications Demonstration Act of 1976 (Public Law 94-309) established a telecommunications demonstration program to promote the development of nonbroadcast telecommunications facilities and services for the transmission, distribution, and delivery of health, education, and public or social service information.

Education Amendments of 1976 (Public Law 94-482) extended and revised Federal programs for education assistance for higher education, vocational education, and a variety of other programs.

1977 Youth Employment and Demonstration Projects Act of 1977 (Public Law 95-93) established a youth employment training program that includes, among other activities, promoting education-to-work transition, literacy training and bilingual training, and attainment of certificates of high school equivalency.

1978 Career Education Incentive Act (Public Law 95-207) authorized the establishment of a career education program for elementary and secondary schools.

Tribally Controlled Community College Assistance Act (Public Law 95-471) provided Federal funds for the operation and improvement of tribally controlled community colleges for Indian students.

Education Amendments of 1978 (Public Law 95-561) established a comprehensive basic skills program aimed at improving pupil achievement

treplacing the existing National Reading Improvement program) and established a community schools program to provide for the use of public buildings.

Middle Income Student Assistance Act (Public Law 95-566) modified the provisions for student financial assistance programs to allow middle-income as well as low-income students attending college or other postsecondary institutions to qualify for Federal education assistance.

- 1979 Department of Education Organization Act (Public Law 96-88) established a Department of Education containing functions from the Education Division of the Department of Health, Education, and Welfare along with other selected education programs from H.E.W., the Department of Justice, Department of Labor, and the National Science Foundation.
- 1980 Asbestos School Hazary Protection and Control Act of 1980 (Public Law 96-270) established a program for inspection of schools for detection of hazardous asbestos materials and provided loans to assist education agencies in containing or replacing such materials.

Amendments to the Higher Education Act (Public Law 96-374) provided for a new Commission on National Development in Postsecondary Education and a new Urban Grant University Program.

- 1981 Education Consolidation and Improvement Act of 1981 (Public Law 97-35) consolidated 42 programs into 7 programs to be funded under the elementary and secondary block grant authority.
- Student Loan Consolidation and Technical Amendments Act of 1983 (Public Law 98-79) established 8-percent rate for Guaranteed Student Loans and extended Family Contribution Schedule.

Challenge Grant Amendments of 1983 (Public Law 98-95) amended Title III, Higher Education Act, and added authorization of the Challenge Grant program, which provides match-

· , i.

ing funds to eligible institutions as incentive to seek alternative sources of fundina.

**Education of Handicapped Act Amend**ments (Public Law 98-199) added architectural barrier amendment and clarified participation of handicapped children in private schools.

Education Consolidation and Improvement Act of 1981 Amendments (Public Law 98-211) added technical amendments for Chapter 1 and provided for parental involvement and minor changes in other programs.

1984 Rehabilitation Amendments of 1984 (Public Law 98-221) revised and extended the Rehabilitation Act of 1973 and provided for the Helen Keller National Center for Deaf-Blind.

> **Education for Economic Security Act** (Public Law 98-377) added new science and mathematics programs for elementary, secondary and postsecondary education. The new programs include magnet schools, excellence in education, and equal access.

> Higher Education Act of 1965 Amendments (Public Law 98-312) amended Title III of the Higher Education Act of 1965 by creating a new method of funding the Challenge Grant program. The act also increased the level of authorization for the Office of the Inspector General and extended the Allen J. Ellender Fellowship program through fiscal year 1989.

> Carl D. Perkins Vocational Education Act (Public Law 98-524) continued Federal assistance for vocational education through fiscal year 1989. The act replaced the Vocational Education Act of 1963. It provides aid to the States to make vocational education programs accessible to all persons. including the handicapped and disadvantaged, single parents and homemakers, and the incarcerated.

> **Human Services Reauthorization Act** (Public Law 98-558) reauthorized the Head Start and Follow Through programs through fiscal year 1986. It also

created a Carl D. Perkins scholarship program, a National Talented Teachers Fellowship program, a Federal Merit Scholarships program, and a Leadership in Educational Administration program.

## **Highlights**

- According to 1985 estimates, about 44 percent of the \$38.6 billion dollars spent by the Federal Government on education came from the Department of Education. Large amounts of money also came from the Department of Agriculture (\$5.4 billion), the Department of Health and Human Services (\$4.8 billion), the Department of Defense (\$3.0 billion), and the Department of Energy (\$2.1 billion). (Table 224)
- In fiscal year 1985, Federal program funds for elementary and secondary education amounted to \$18.3 billion; for higher education, \$10.3 billion; for research at universities and related institutions, \$8.4 billion; and for other programs, \$1.5 billion. Between fiscal years 1980 and 1985, funds for ele-

- mentary and secondary education grew by 10 percent, funds for higher education fell by 4 percent, research funds grew by 45 percent, and funds for other programs grew by 10 percent. (Table 225)
- Between fiscal years 1981 and 1986, Department of Education obligations rose by 22 percent. Funds for student financial assistance increased from \$6.4 billion to \$8.8 billion, a rise of 37 percent. Funds for elementary and secondary education in 1986 stood at an estimated \$4.7 billion, an increase of 17 percent since 1981. Funds for the handicapped increased by about 11 percent, while funds for vocational education climbed about 2 percent. (Table 226)
- Total Federal support for education was \$63.3 billion in fiscal year 1984, up 19 percent from fiscal year 1980. From fiscal year 1980 to fiscal year 1984, Federal program funds grew by 5 percent; federally supported student aid rose 60 percent; and estimated Federal tax expenditures for education increased by 39 percent. (Table 233)

Dollars reflect actual obligations during the fiscal year regardless of when the funds were actually spent by a recipient institution. Data include obligations to federally funded research and development centers administered by colleges and universities.

\*\*Ancludes Department of Commerce, Department of Housing and Urban Development, Department of the Interior, Agency for International Development, Department of Labor, Department of Transportation, and Nuclear Regulatory Commission.

NOTE.—Totals exclude loans to individuals, such as the Federal Guaranteed Student Loan program aponsored by the Department of Education, and Federal training and development activities, as well as funds allocated to State agencies, even though the final recipient of such funds is known to be an academic institution. Tuition support programs such as Pell Grants are included in these figures.

## Chapter V

# **Economic Outcomes of Education**

One of the primary goals of education is to prepare individuals to enter the work force. In recent years, many have questioned the value of education in securing high paying jobs. Available statistics confirm the benefit of education to the individual: Those in the labor force with higher levels of education are more likely to have higher paying jobs and less likely to be unemployed than those with less education. There are wide discrepancies in labor force and educational characteristics among racial and ethnic groups, and disadvantages for minority youths who drop out of high school are particularly marked.

This chapter consists of selected tables comparing educational attainment and work force characteristics. The data show labor force participation and income levels of high school dropouts, high school graduates, and bachelor's degree recipients. Population characteristics are provided for many of the measures to help evaluate disparities among various demographic groups.

The first set of tables contains data from the Bureau of the Census and the Bureau of Labor Statistics on educational attainment and income of the labor force. These tables provide information on the educational attainment of the labor force, by occupation, sex, and race; money income, by level of education attained; and unemployment rates, by years of education attained, sex, and race.

The second group of tables was compiled from data available from the Bureau of Labor Statistics on high school dropouts and graduates. These data show the labor force participation and college enrollment of high school students within the year they leave school. The tabulations also provide comparative labor force participation and unemployment rates for graduates and dropouts. Additional information on college enrollment rates by race and sex have been included to help form a more complete picture of high school outcomes.

The third set of tables has been prepared from the Center for Education Statistics' survey, "Recent College Graduates." These tables

provide data on employment outcomes for college graduates about 1 year after graduation. A new table for this edition of the *Digest* provides a detailed comparison of field of college degree and entry into various occupational areas. Trends in salaries received by college graduates are also featured in this section.

Statistics on educational attainment of the entire population may be found in chapter I. More detailed data on the number of degree recipients are contained in chapters II and III. Additional data on the income of persons by educational attainment may be obtained from the Bureau of the Census in the Current Population Reports, Series P-60. The Bureau of Labor Statistics has a selection of publications dealing with the educational characteristics of the labor force. Further information on survey methodologies can be found in the Guide to Sources in this publication and in the cited source documents.

## **Highlights**

- Those with lower levels of educational attainment were mere likely to be unemployed than those who had attained higher levels of education. The 1986 unemployment rate for those with 1 to 3 years of high school was 15.4 percent compared to 8.1 percent for those with 4 years of high school and 2.5 percent for those with 4 or more years of college.\* Minorities and younger people tended to have relatively high unemployment rates, even after allowing for level of educational attainment. (Table 235)
- Between 1975 and 1985, annual income generally rose more rapidly for men with higher levels of educational attainment than for those with less. For example, the income of men who were year-round full-time

RIC

338

281

<sup>\*</sup>The unemployment rate for all persons with 8 years or less of school was lower than the rate for those who had completed 1 to 3 years of high school. The people with 8 years or less were generally older workers who tend to have low unemployment rates because of their experience in the work force.

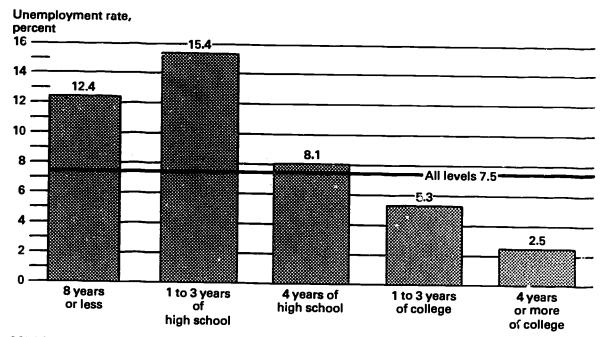

#### 282 ECONOMIC OUTCOMES

workers with 4 years of college education rose by 88 percent compared to 64 percent for those with 1 to 3 years of high school. Men who had completed 4 years of high school had an increase of 76 percent. Though in general women's incomes rose faster than men's incomes (111 percent compared to 91 percent), they remain below men's at every level. (Table 237)

- The problems of dropouts are highlighted by comparing the labor force and the unemployment status of 1984-85 dropouts and graduates. Only 67 percent of the dropouts were in the labor force (employed or looking
- for work) and of those in the labor force 36 percent were unemployed. Of the high school graduates who were not in college, 82 percent were in the labor force and 25 percent were unemployed. (Tables 238 and 239)
- About 58 percent of the college graduates of the class of 1983-84 had jobs in professional, managerial, and technical areas in 1985. Twenty-six percent were employed in nonprofessional and nontechnical areas and 3 percent were unemployed. Many of the 12 percent who were not in the labor force were enrolled in graduate school. (Table 240)

## Chapter VI

# International Education

This chapter offers a broad perspective on education among the nations of the world. It also provides an international context for examining the condition of education in the United States. Although the Center for Education Statistics has not been active in collecting international data, it has recently funded a number of research studies comparing mathematics performance among various nations. Also, a study entitled "A Comparison of Teachers' Salaries in Japan and the United States" was recently released. In addition, the Center has cooperated with international agencies in the compilation of statistics.

The data in this chapter were drawn from material prepared by the United Nations Educational, Scientific, and Cultural Organization (UNESCO), the Institute of International Education, and the International Association for Evaluation of Educational Achievement. The basic summary data on enrollments, teachers, enrollment ratios, illiteracy rates, and finances were synthesized from information appearing in the annual Statistical Yearbook published by UNESCO. Even though UNESCO tabulations are very carefully prepared, international data users should be cautioned about the many definitional and reporting problems involved in the collection of data about the wide variety of educational systems in the world.

This chapter also contains data from the latest international assessment of mathematics achievement. This assessment, coordinated by the Association for Evaluation of Educational Achievement, provides comparative data for about 20 countries. A different perspective is provided by data from the Institute of International Education on the enrollment of foreign students in U.S. institutions of higher education, by country of origin.

Further information on survey methodologies can be found in the Guide to Sources and in the publications cited in the source notes.

## **Highlights**

 In 1983, there were about 874 million students in schools around the world. Of these students, 572 million were in elementary level programs, 250 million were in secondary programs, and 52 million were in post-secondary programs. (Table 243)

- Between 1970 and 1983, enrollments grew rapidly, particularly in the lest developed areas of the world. Elementary school enrollment rose 32 percent during the time period. Elementary enrollment changes ranged from increases of 114 percent in Africa to declines of 13 percent in Europe and North America. In general, enrollment changes at the secondary and postsecondary levels followed this same pattern, with large increases in Africa and smaller increases or decreases in Europe and North America. (Table 243)
- Pupil-teacher ratios in elementary and secondary schools vary widely from country to country. In 1983, the countries with relatively low ratios were the Soviet Union (9.7) and Italy (11.8). Countries with relatively high ratios included Mexico (28.0) and Japan (20.5). (Table 244)
- A comparison of public expenditures on education as a percent of gross national product (GNP) reveals significant differences among nations. For example, the proportion of GNP for the United States in 1983 was 5.5 percent. Other countries ranged from 2.1 percent for Nigeria and 2.7 percent for Mexico to 8.0 percent for Canada and 8.5 percent for Sweden. (Table 247)
- U.S. students ranked well below average in an international test of mathematical skills of 8th grade students. Only 6 of 19 other nations scored below the United States. U.S. students scored above the international average on arithmetic and statistics, but they scored below the international average on algebra, geometry, and measurement tests. (Table 248)
- In an analysis of international mathematics testing for the most advanced 12th grade mathematics students, U.S. students ranked

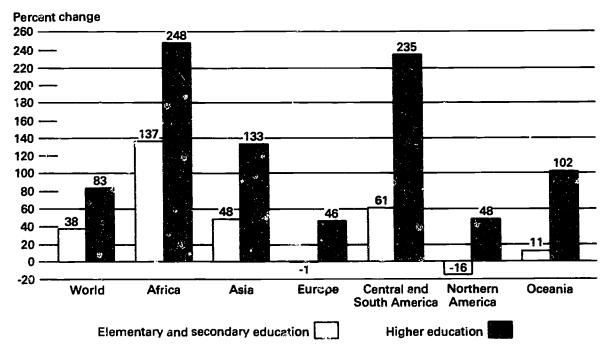

ERIC A Full Text Provided by ERIC

354 295

next to last among the 14 participating nations. The best scores were made by Japanese students, who had the highest average scores in each of the three parts of the test—algebra, geometry, and calculus. The Japanese students are the students of the test—algebra, geometry, and calculus.

nese schools were also among the most likely to have covered the material that was tested on the exam. Only schools in British Columbia covered a smaller portion of the material than American schools. (Table 249)

<sup>&</sup>lt;sup>1</sup>Selection based on total population for midyear 1983.

Adj. stments have been made for the varying lengths of first and second level aducation. All third level ratios are based on the 20- to 24-year-old population. Because some "puntries have many students from outside the normal ago range, first lower ratios may exceed 100.

\*\*First-liment totals and enrollment ratios exclude North Korea, Enrollment ratios exclude China.

<sup>&</sup>lt;sup>2</sup> First level enrollment generally consists of elementary grades.

<sup>\*</sup>Second level enrollment includes general education, teacher training (at the second level), and technical and vocational education. This level gets reliy corresponds to secondary education in the United States.

<sup>4</sup>Third level enrollment includes college and university derollment and technical and vocational education beyond the high school level. There is considerable variation in reporting from country to country.

<sup>\*</sup>Illitoracy data estimated by UNESCO for 1985 period fixes of on reports from individual countries.

<sup>\*</sup>Data are the total enrollment of all ages in the school level divided by the population of the specific age groups which correspond to the school level.

<sup>\*1092</sup> estimate by the Center for Education Statistics.

<sup>\*1983</sup> data.

<sup>19982</sup> data.
11Includes universities only.
12Includes universities only for 1982.
13Includes students in general programs only.

# Chapter VII

# **Learning Resources and Technology**

This chapter contains statistics on libraries and on the use of information technologies. These data provide an indication of the extent of America's access to information technologies outside of formal classroom activities. The data also provide a capsule description of the magnitude and availability of library resources. Access to information has been widely cited as the key to success in a growing number of endeavors. Thus, how information is made available and to whom become matters of concern.

The tables in this chapter are based on periodic surveys conducted by the Center for Education Statistics. One table on the availability of selected types of technology has been extracted from a Corporation for Public Broadcasting survey sponsored by the Center.

Tables in the first section of this chapter deal with public libraries, public school libraries, and college and university libraries. These tables contain data on collections, population served, staff, and expenditures. A new survey of public school libraries is featured in this edition of the *Digest*. Two tables provide institutional-level information for the largest public libraries and the largest college libraries in the country.

The second half of this chapter provides information on the availability and use of technology. For example, the proportion of schools with microcomputers is tabulated for a period of years to permit trend comparisons. Experiences with computer software and programming are presented for recent high school graduates. Comparisons of the availability of information technologies are made for various demographic groups.

Related data may be found in various sections of this report. For example, statistics on the number of degrees conferred in computer and information sciences and library sciences

may be found in chapter III. Further inform tion on survey methodologies can be found the Guide to Sources and in the publication cited in the source notes.

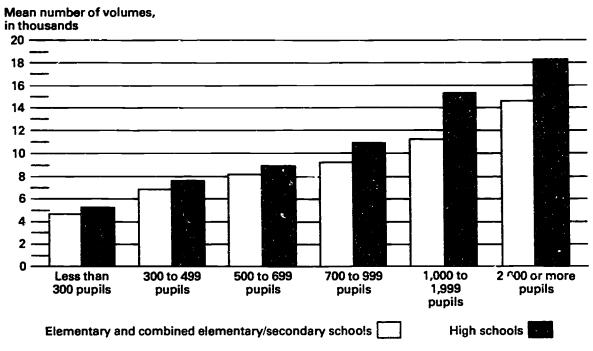

# **Highlights**

- In fall 1985, more than 93 percent of all public schools had libraries or media centers. (Table 254)
- During the 1984-85 school year, public school libraries held an average of 7,668 books, 34 periodical subscriptions, and 540 films and filmstrips. (Table 255)
- Total expenditures for college libraries rose by 78 percent between 1974-75 and 1981-82. However, the proportion of college budgets spent on libraries fell from 3.9 percent to 3.5 percent during the same time period. (Table 256)
- The number of public schools using microcomputers has risen rapidly in recent years.
   Between fall 1981 and fall 1985, the proportion of public schools with computers rose from 18 percent to 92 percent. (Table 258)
- In general, Americans have extensive access to information technologies in their homes. About 99 percent of all adults have television in their homes, and 82 percent have audiotape players. More than one-fifth of all school-age children have computers in their homes. (Table 259)
- In 1984, more than half of young adults (who had been high school seniors in 1980) had used computers. More than a third had writter a program in a computer language. The computer languages most often used by these young adults were BASIC (28 percent) and FORTRAN (12 percent). (Tables 260 and 261)

<sup>11984</sup> sample survey based on people who were high school seniors in spring 1980.

SOURCE. U.S. Department of Education, Center for Education Statistics, "High School and Beyond" survey. (This table was prepared September 1986.)

<sup>&</sup>lt;sup>2</sup>Socioeconomic status was measured by a composite score on parental education, family income, father's occupation, and household characteristics in 1980.

# Guide to Tabular Presentation

This section is intended to assist the reader in following the basic structure of the *Digest* tables and to provide a legend for some of the common symbols and indexes used throughout the book.

# **Table Components**

Title Describes the table content concisely.

Unit indicator Informs the reader of the measurement unit in the table—"In thousands," "In millions of dollars," etc. Noted below the title unless several units are used, in which case the unit indicators are generally given in the spanner or individual column heads.

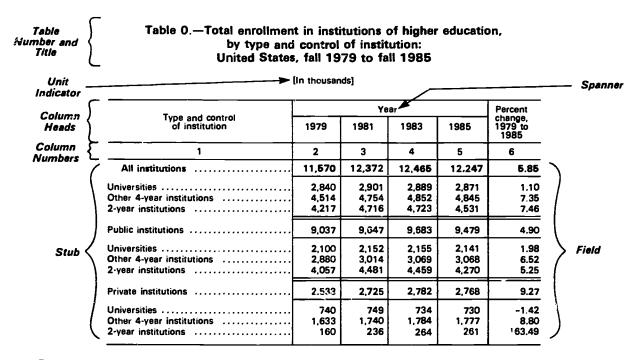

Spanner Describes a group of two or more columns.

Column head Describes specific column.

**Stub** Describes a row or a group of rows. Each stub is followed by a number of dots (leaders) or by a semicolon if no data appears in the data fields.

Field The area of the table which contains the data elements.

Footnote Describes a unique circumstance relating to a specific item within the table. Usually listed below the bottom rule of the table.

Note -> NOTE.—Includes undergraduate, graduate, first-professional, and unclassified students.

Source SOURCE: U.S. Department of Education. Center for Education Statistics. "Fell Enrollment in Colleges and Universities" surveys. (This table was prepared July 1986.)

318

Note Furnishes general information that relates to the entire table.

Source The document or reference from which the data are drawn. This note may also include the organizational unit responsible for preparing the data.

#### Rules in the field

Single horizontal rules indicate

- that the data below the line add to the figure immediately above the line, or
- in the case of derived figures (e.g., percents, medians) that the datum above the line represents a cumulative figure.

Double horizontal rules demarcate groups of related rows.

Single vertical rules delineate columns.

Double vertical rules divide the table into sections with unique stubs.

# **Descriptive Terms**

Average A single number or value that is often used to represent the "typical value" of a group of numbers. It is regarded as a measure of "location" or "central tendency" of a group of numbers.

Arithmetic mean is the most commonly used average. It is derived by summing the individual item values of a particular group and dividing that sum by the number of items. This value is often referred to simply as the "mean" or "average."

Median is the measure of central tendency that occupies the middle position in a rank order of values. It generally has the same number of items above it as below it. If there is an even number of items in the group, the median is taken to be the average of the middle two items.

Per capita, or per person, figure represents an average computed for every person in a specified group, or population. It is derived by taking the total for an item (such as income or expenditures) and dividing it by the number of persons in the specified population.

Index number Usually expressed as percent,

provides a means of measuring, summarizing, and communicating the nature of changes that occur from time to time or from place to place. Most widely used to express changes in prices over periods of time but may also be used to express differences between related subjects at a single point in time. The Digest most often uses the Consumer Price Index to compare purchasing power over time.

To compute a price index, a base year or period is selected. The base year price is then designated as the base or reference price to which the prices for other years or periods are related. Many price indexes use the year 1967 as the base year; in the tables, this is shown in the unit indicator as "In 1967 dollars."

The price relationship can be expressed:

Price of a set of one or more items for related year

Price of the same set of items for base year

The result multiplied by 100 provides the index number. When 100 is subtracted from the index number, the result equals the percent change in price from the base year.

Current and constant dollars are used in a number of tables to express finance data. Unless otherwise noted, all figures are in current dollars, not adjusted for inflation. Constant dollars provide a better understanding of the impact of inflation on these figures.

Current dollar figures reflect actual prices or costs prevailing during the specified year(s).

Constant dollar figures are estimates representing an effort to remove the effects of price changes from statistical series reported in dollar terms.

In general, constant dollar series are derived by dividing current dollar estimates by the appropriate price index for the appropriate period (for example, the Consumer Price Index). The result is a series as it would presumably exist if prices were the same in all years as in the base year-in other words, as if the dollar had constant purchasing power. Any changes in this constant dollar series would reflect only changes in the real amount.

# Guide to Sources Sources and Comparability of Data

The information presented in this report was obtained from many sources, including Federal and State agencies, private research organizations, and professional associations. The data were collected using many research methods including surveys of a universe (such as all colleges) or of a sample, compilations of administrative records, and statistical projections. -Digest users should take particular care when comparing data from different sources. Differences in procedures, timing, phrasing of questions, interviewer training, and so forth mean that the results from the different sources are not strictly comparable. Following the general discussion of data accuracy below, descriptions of the information sources and data collection methods are presented, grouped by sponsoring organization. More extensive documentation of one survey's procedures than of another's does not imply more problems with the data, only that more information is available.

# **Accuracy of Data**

The accuracy of any statistic is determined by the joint effects of "sampling" and "nonsampling" errors. Estimates based on a sample will differ somewhat from the figures that would have been obtained if a complete census had been taken using the same survey instruments, instructions, and procedures. In addition to such sampling errors, all surveys, both universe and sample, are subject to design, reporting, and processing errors and errors due to nonresponse. To the extent possible, these nonsampling errors are kept to a minimum by methods built into the survey procedures. In general, however, the effects of nonsampling errors are more difficult to gauge than those produced by sampling variability.

## Sampling Error

The standard error is the primary measure of sampling variability. It provides a specific range—with a stated confidence—within which a given estimate would lie if a complete census had been conducted. The chances that a complete census would differ from the sample by less than the standard error are about 68 out of 100. The chances that the difference would be less than 1.65 times the standard error are about 90 out of 100; that the difference would be less than 1.96 times the standard error, about 95 out of 100; and that it would be less than 2.5 times as large, about 99 out of 100.

To illustrate this measure, consider the table of standard errors and 95 percent confidence intervals for estimates from the 1985 "Survey of Public and Private School Libraries and Media Centers" sample (table A1). For the estimate that 93.5 percant of all schools have library programs, the table shows that the standard error is 0.54 percent. This means that the chances are about 68 out of 100 that the 93.5 percent estimate differs by  $\pm 0.54$  percent from the value that would result from a complete of nsus. Therefore, the 68 pe cent confidence interval is 92.9 to 93.9, in order to increase our confidence to 95 percent, we would have to consider estimates within 1.06 percent of our estimate (1.96 times the standard error). Therefore the 95 percent confidence interval (rounded to tenths of a percent) would then be 93.5  $\pm$  1.06, or 92.3 to 94.5, which is the interval shown in the table.

Standard error can help assess how valid a comparison between two estimates might be. The standard error of a difference between two sample estimates is approximately equal to the square root of the sum of the squared standard errors of the estimates. The standard

379

error (se) of the difference between sample estimate "a" and sample estimate "b" is:

$$se_{a,b} = \sqrt{se_a^2 + se_b^2}$$

It should be noted that most of the standard errors presented in subsequent sections and in the original documents are approximations. That is, to derive estimates of standard errors that would be applicable to a wide variety of items and could be prepared at a moderate cost, a number of approximations were required. As a result, most of the standard errors presented provide a general order of magnitude rather than the exact standard error for any specific item.

The preceding discussion on sampling variability was directed toward a situation concerning one or two estimates. Determining the accuracy of statistical projections is more difficult. In general, the further away the projection date is from the date of the actual data being used for the projection, the greater the possible error in the projection. If for instance annual data from 1970 to 1985 are being used to project enrollment in institutions of higher education, the further beyond 1985 one projects, the more variability in the projection. One will be less sure of the 1990 enrollment projection than of the 1986 projection. A detailed discussion of the projections methodology is contained in Projections of Education Statistics to 1992-93 (Center for Education Statistics, 1985).

## Nonsampling Error

Both universe and sample surveys are subject to nonsampling errors. Nonsampling errors are of two kinds-random and nonrandom. Random nonsampling errors may arise when respondents or interviewers interpret questions differently, when respondents must estimate values, or when coders, keyers, and other processors handle answers differently. Nonrandom nonsampling errors result from total nonresponse (no usable data obtained for a sampled unit), partial or item nonresponse (only a portion of a response may be usable), inability or unwillingness on the part of respondents to provide correct information, difficulty interpreting questions, mistakes in

recording or keying data, errors of collection or processing, and overcoverage or undercoverage of the target universe. Random nonresponse errors usually, but not always, result in an understatement of sampling errors and thus an overstatement of the precision of survey estimates. Since estimating the magnitude of nonsampling errors would require special experiments or access to independent data, these magnitudes are seldom available.

To compensate for suspected nonrandom errors, adjustments of the sample estimates are often made. For example, adjustments are frequently made for nonresponse, both total and partial. An adjustment made for either type of nonresponse is often referred to as as an imputation—substitution of the "average" questionnaire response for the nonresponse. Imputations are usually made separately within various groups of sample members which have similar survey characteristics. Imputation for item nonresponse is usually made by substituting for a missing item the response to that item of a respondent having characteristics that are similar to those of the nonrespondent.

Although the magnitude of nonsampling error in the data collected in this Digest is frequently unknown, idiosyncrasies which have been identified are noted on the appropriate tables.

# **Federal Agency Sources** Center for Education Statistics (CES)

## Common Core of Data

CES uses the "Common Core of Data" (CCD) survey to acquire and maintain statistical data on the fifty States, the District of Columbia, and the outlying areas from the universe of Statelevel education agencies. Information about staff and students is collected annually at the school, LEA (local education agency or school district) and State levels. Information about revenues and expenditures is also collected at the State level.

Data are collected for a particular school year (July 1 through June 30) via survey instruments sent to the States by October 15 of

the subsequent school year. States have 2 years in which to modify the data originally submitted.

Sinc: the CCD is a universe survey, the CCD information presented in this edition of the *Digest* is not subject to sampling error. However, nonsampling error could come from two sources—nonreturn and inaccurate reporting. Almost all of the States submit the six CCD survey instruments each year, but there are many delays in submitting data and the submissions are sometimes incomplete.

Understandably, when 57 education agencies compile and submit data for over 85,000 public schools and approximately 15,800 local school districts, misreporting can occur. Typically, this results from varying interpretation of CES definitions and differing recordkeeping systems. CES attempts to minimize these errors by working closely with the Council of Chief State School Officers (CCSSO) and its Committee on Evaluation and Information Systems (CEIS).

The State education agencies report data to CES from data collected and edited in the regular reporting cycles for which CES reimburses them. CES encourages the agencies to incorporate into their own survey systems the CES items they do not already collect so that those items will also be available for the subsequent CCD survey. Over time this has meant fewer missing data cells in each State's response, reducing the need to impute data.

CES subjects data from the education agencies to a comprehensive edit. Where data are determined to be inconverent, missing, or out of range, CES contact the education agencies for verification. CES-proposed State summary forms are returned to the State education agencies for verification. States are also given an opportunity to revise their State-level aggregates from the previous survey cycle.

#### 1983-84 Private School Survey

The "1983 Private School Survey" was carried out in two parts, one based on a "list" frame and one based on an "area" frame. The area frame was used under the assumption that the lists available to CES were not comprehensive and that list-building techniques applied to a sample of census areas would reveal some additional private schools. CES started with the most complete list available, comprising some 21,000 schools, and updated it in 1983, based on review of new directories and other published sources. This effort resulted in a list of just under 27,000 schools. This frame was then stratified into 12 strata based on various combinations of religious affiliation and school level. A systematic sample of 1,320 schools was selected with probabilities equal to the square root of the enrollment of the school divided by the sum of the square roots of enrollment for all of the schools in the stratum. Inflating this sample provided an estimation universe, which was subsequently reduced by removing the estimated numbers of duplicates, nonrespondents, coding errors, and ineligibles. The final estimated list universe of schools was 21,710. The response rate for the list sample was 91 percent (1,074 of 1,176 schools), and the response rate for the area sample was 81 percent (733 or 901 schools).

For the area sample, the basic frame was a list of all counties reported from the 1980 census, adjusted so that independent cities were treated as counties and smaller counties were combined with other contiguous counties. This produced a list of 2,497 sampling units. These sampling units were stratified according to census region, in or out of a Standard Metropolitan Statistical Area (SMSA), and above or below the median private school enrollment for that region and SMSA status, yielding 16 strata. The final sample was a systematic one comprising 75 sampling units, 8 of which were drawn with certainty based upon populations exceeding 1.7 million in the 1980 census. The remaining units were selected with probabilities proportionate to the square root of the population of the unit within the stratum.

For each of the sampling units in the area design, schools not overlapping with the list-

frame schools were sought by reviewing directories of various types (e.g., private school organizations, telephone) and by telephoning officials, churches, chambers of commerce, and selected vendors, such as milk companies. This search produced 901 schools which met CES criteria for functioning private schools. The survey and followup produced a response rate of 88 percent. When weighted, these data inflated to approximately 6,000 schools nationally. Since the area frame was designed not to overlap with the list frame, results for the area sample were combined with those for the list sample.

A followup survey was conducted in 1985. The schools within the sampling areas were drawn from the lists of schools created in the same sample areas from the "1983 Private School Survey." Since the lists were not updated, schools established after 1983 were not generally eligible for sampling. The estimates for the 1985-86 study are valid for schools that were in existence in 1983. Some of the estimates contain extrapolations for newly established schools, based on assumptions made from the 1983 survey data.

During the fall of 1985 the principal of each sampled school was contacted to obtain the school's participation in the study and to sample up to 10 teachers at the school. During January 1986, questionnaires were mailed to schools and teachers. Followup for questionnaire and item nonresponse was conducted during the spring of 1986. Imputations were made for item nonresponse. Of the 1,387 eligible schools, 1,174 responded (35 percent). A total of 5,295 teacher questionnaires were completed, for a teacher response rate of 76 percent.

# 1985 Survey of Public and Private School Libraries and Media Centers

Statistics of public school libraries have been collected periodically since 1958. The last survey was conducted in 1978. The 1978 survey form was substantially revised for the 1985 data collection, based on consultations with various associations and individuals including the American Library Association and the American Association of School Librarians. This sample survey was conducted under contract to CES. The survey forms were mailed to a nationally representative sample of 500 public schools in the fall of 1985 and to a sample of 1,700 private schools in January of 1986. Data collection continued throughout the 1985-86 school year until a response rate of 92 percent for public schools and 85 percent for private schools was attained. Tabulations on the private school portion of the survey were not available while this edition of the Digest was being prepared. These data will be released by CES in 1987. Estimates in the library survey tables are based on samples and are subject to sampling variability. Caution should be exercised in interpreting figures based on a relatively small number of cases. Although the standard errors are quite low for most of the national statistics, they can be substantial when comparing data from State to State (these State data will be available in other CES reports). In a number of States, budgets restricted sample sizes to 75. Table A1 gives standard errors for several representative statistics. For example, the national estimate of per pupil expenditures for books is \$6.24, and the standard error is \$.15. The chances are thus 95 out of 100 that the result from a complete census could differ from the estimate by less than \$.30 (1.96 times the standard error). The 95 percent confidence interval is thus \$5.94 to \$6.54.

Additional information on these school library studies is available from:

Jeffrey Williams
Elementary and Secondary Education
Statistics Division
Center for Education Statistics
555 New Jersey Avenue, NW.
Washington, DC 20208

Table A1.—Selected standard errors for selected items in the "Survey of Public and Private School Libraries and Media Centers, 1985"

	Items for public Estimate		95% confidence interval	
items for public school libraries	Estimate	Standard error	Lower	Upper
Percent of schools having		1	_	
library/media centers		1		
All schools	93.5	0.54	92.3	94.5
econdary schools	98.0	0.97	96.1	99.9
Schools with 500 to 699 pupils	98.5	0.39	97.8	99.3
Average expenditure per pupil		1		
for books				
All schools	\$6,24	0.1524	85.94	\$6.54
Secondary schools	7.40	0.3253	6.77	8.04
chools with 700 to 999 pupils	4.67	0.1743	4.33	5.01
Average book volumes held				
per pupil				
All schools	20.3	0.3784	19.5	21.0
lementary and combined schools	20.6	0.4275	19.8	21.5
ichools with over 2,000 pupils		0.3782	8.7	10.2

# Survey of School Discipline Policies and Prectices

This sample survey used the CES Fast Response Survey System (FRSS), which is designed to gather timely information for policy makers. In February 1985, questionnaires were mailed to a stratified national probability sample of 900 public junior and senior high schools, representing approximately 30,000 schools. About 60 schools were determined to be out of the scope for the survey since they did not have regular secondary school programs. The final sample represents an estimated 26,365 schools. The sample was allocated proportionately to the number of schools in each of four strata—junior high, senior high, combined, and other (including ungraded, vocational education, special education, and alternative schools). The survey form was completed by the school administrator (often the principal) most familiar with discipline policies of the school. The response rate for the survey was 93 percent. Responses were adjusted for nonresponse and weighted to national totals. Standard errors for selected items are shown in table A2 as a general guide to the precision of the numbers.

For more information about this survey contact:

Helen Ashwick Education Outcomes Division Center for Education Statistics 555 New Jersey Avenue, NW. Washington, DC 20208

#### Higher Education General Information Survey

The "Higher Education General Information Survey" (HEGIS) is a coordinated effort administered by CES to acquire and maintain statistical data on the characteristics and operations of institutions of higher education. Developed in 1966, HEGIS is an annual universe survey of institutions listed in the latest CES Education Directory. Colleges and Universities.

The information presented in this report draws on HEGIS surveys which solicit information concerning institutional characteristics, faculty salaries, finances, enrollment, and degrees. Since these surveys cover all institutions in the universe, the data presented are not subject to sampling error. However they are subject to nonsampling error, the sources of which vary with the survey instrument. Each survey will therefore be discussed separately. Information concerning the nonsampling error of the enrollment and degrees surveys draws extensively on the "HEGIS Post-Survey Validation Study" conducted in 1979.

Items for secondary achools	F-2'		95% confidence	e interval

<sup>&</sup>lt;sup>1</sup>Data are for the 1983-84 school year.

Includes only reported thefts of personal items valued at \$10.00 or more.

Institutional Characteristics of Colleges and Universities. This survey provides the basis for the universe of institutions presented in the Education Directory, Colleges and Universities, and it is used in all other HEGIS data collection activities. The universe comprises institutions that offer at least a 1-year program of college-level studies leading toward a degree and that meet certain accreditation criteria. In the fall, institutions included in the Directory the previous year receive a computer printout of their information to update. Institu-

tions not previously included and which have applied for *Directory* listing are sent a questionnaire. All institutions reported are certified as eligible to he listed by the Division of Eligibility and Agency Evaluation within the U.S. Department of Education.

Opening Fall Enrollment in Colleges and Universities. This survey has been part of the HEGIS series since its development. The enrollment survey does not appear to suffer significantly from problems associated with nonresponse: The 1985 response rate was 92

percent. Major sources of nonsampling error for this survey are classification problems, the unavailability of needed data, interpretation of definitions, the survey due date, and operational errors. Of these, the classification of students appears to be the main source of error. Institutions have problems in correctly classifying first-time freshmen, other first-time students, and unclassified students for both full-time and part-time categories. These problems occur most often at 2-year institutions (both private and public) and private 4-year institutions. In 1977-78, the classification problem led to an estimated overcount of 11,000 fulltime students and an undercount of 19,000 part-time students. Although the level of error for the grand total was quite small (less than 1 percent), errors were as high as 5 percent for detailed student levels and even higher at certain aggregation levels.

Salaries, Tenure, and Fringe Benefits of Full-Time Instructional Faculty. This survey has been conducted every year since 1966, except for 1973-74. Although the survey form has changed a number of times during these years, only comparable data are presented in the report. The data are collected from the colleges and universities in a summary fashion.

This survey differs from other HEGIS surveys in that imputations are not made for nonrespondents. Thus, there is some possibility that the salary averages presented in this report may differ from the results of a complete enumeration of all colleges and universities. The response rate for the 1984-85 survey was 86.3 percent. The response rate for public colleges was substantially higher than the response rate for private colleges. It is probable that public colleges' salary data are more accurate than the data for private colleges. Other sources of nonsampling error include computational errors and misclassification in reporting and processing. CES checks individual colleges' data for internal and longitudinal consistency and contacts the colleges to check inconsistent data.

Earned Degrees Conferred. This survey has been part of the HEGIS series since its development. However, the degree classification taxonomy was revised in 1970-71 and 1982-83. Though information from survey years 1970-71 through 1981-82 is directly compar-

able, care must be taken if information before or after that period is included in any comparison. Degrees-conferred trend tables arranged by the 1982-83 classification have been added to the Digest to provide consistent data from 1970-71 to 1983-84. Data in this edition on associate and other formal awards below the baccalaureate are not directly comparable with figures for earlier years. The nonresponse rate does not appear to be a significant source of nonsampling error for this survey. The return rate over the years has been extremely high, with the response rate for the 1983-84 survey at 95 percent. Because of the high return rate, nonsampling error caused by imputation would also be minimal.

The major sources of nonsampling error for this survey are differences between the HEGIS program taxonomy and taxonomies used by the colleges, classification of double majors and double degrees, operational problems, and survey timing. In the 1979 validation study, these sources of nonsampling error were found to contribute to an error rate of 0.3 percent overreporting of bachelor's degrees and 1.3 percent overreporting of master's degrees. The differences, however, varied greatly among fields. Over 50 percent of the fields selected for the validation study had no errors identified. Categories of fields that had large differences were business and management, education, engineering, letters, and psychology. It is also shown that differences in proportion to the published figures were less than 1 percent for most of the selected fields that had some errors. Exceptions to these were: master's and Ph.D. programs in labor and industrial relations (20 percent and 8 percent); bachelors's and master's programs in art education (3 percent and 4 percent); bachelor's and Ph.D. programs in business and commerce, and in distributive education (5 percent and 9 percent); master's programs in philosophy (8 percent); and Ph.D. programs in psychology (11 percent).

Financial Statistics of Institutions of Higher Education. This survey has been part of the HEGIS series since its development. A number of changes were made in the financial survey instruments in 1975. In 1982 another change was made to include Pell Grants in Federal restricted grants and contracts revenues and re-

stricted scholarships and fellowships expenditures. Wille these changes were significant, only comparable information on trends is presented in this report, except where noted. Finance tables for this publication have been adjusted by subtracting the Pell Grant amounts from the later data to maintain comparability with pre-1982 data.

Other possible sources of nonsampling error in the financial statistics are nonresponse, imputation, and misclassification. The response rate has been over 90 percent for most of the years reported. The response rate for the latest (fiscal year 1985) survey was 87.6 percent.

Two general methods of imputation have been used, if the prior year's data were available for a nonresponding institution, these data were inflated using the Higher Education Price Index and adjusted according to changes in enrollments. If no previous year's data were available, current data were used from peer institutions selected for location (State or region), control, level, and enrollment size of institution. For the most recent years reported. the imputation method did not include the adjustment for changes in enrollments, and new institutions which never reported to HEGIS surveys were not imputed. For the fiscal year 1985 survey, survey forms were mailed to 3,379 institutions. Reports were received from 2,959 institutions, and data for 370 institutions were estimated based on their fiscal year 1984 reports inflated by the Higher Education Price Index. The remaining 50 institutions were not imputed because they had never responded to HEGIS surveys. It should be noted that the imputed current-fund expenditures of the nonrespondents have generally been less than 3 percent of the aggregate U.S. total.

To reduce reporting error, CES uses national standards for reporting finance statistics. These standards are contained in Colleges and University Business Administration: Administrative Services (1974 Edition), published by the National Association of College and University Business Officers; Audits of Colleges and Universities (as amended August 31, 1974), by the American Institute of Certified Public Accountants; and HEGIS Financial Reporting Guide (1980), by CES. Wherever possible, definitions and formats in the survey form are consistent with these three texts.

Questions concerning the surveys used as data sources for this report or other questions concerning HEGIS can be directed to:

## Survey of Recent College Graduates

CES has conducted periodic surveys to collect information on college outcomes. The "Recent College Graduates" surveys have concentrated on those graduates entering the teaching profession. To obtain accurate results on this subgroup, graduates who are newly qualified to teach have been oversampled in each of the surveys. The survey involves a twostage sampling procedure. First, a sample of institutions awarding bachelor's and master's degrees is selected and stratified by percent of education graduates, control, and geographic region. Then for each of the selected institutions a sample of degree recipients is chosen. The response rates on the "Recent College Graduates" survey have tended to be low because of the great difficulty in tracing the students after graduation. Much more of the nonresponse can be attributed to invalid mailing addresses than to refusals to participate. Despite their shortcomings, the data are presented in this report because they provide valuable information not available elsewhere about college outcomes. Users should be cautious about drawing conclusions based on data from small samples. It is also likely that the data are somewhat biased since the more mobile students, such as graduate students, are the most difficult to track for the survey.

The 1976 survey of 1974-75 college graduates was the first and smallest of the series. The sample consisted of 209 schools, of which 200 (96 percent) responded. Of the 5,506 graduates in the sample, 4,350 responded for a response rate of 79 percent.

The 1981 survey was somewhat larger with a coverage of 301 institutions and 15,852 students. Responses were obtained from 286 institutions, for an institutional response rate of 95 percent, and from 9,312 graduates (716 others were determined to be out of scope), for a response rate of 62 percent.

includes those who had not finished all requirements for teaching certification or were previously qualified to teach.

The 1985 survey requested data from 18,738 students from 404 colleges. Responses were obtained from 13,200 students for a response rate of 74 percent (885 were out of scope). The response rate for the colleges was 98 percent. One major difference between this survey and the earlier ones was the timing of the survey in June. This had some effect on the data for teachers. Table A3 contains sample sizes for number of graduates by field for the 1976, 1981, and 1985 surveys.

#### High School and Beyond

"High School and Beyond" (HSB) is a national longitudinal survey of 1980 high school seniors and sophomores. The base-year survey was a probability sample of 1,015 high schools with a target number of 36 seniors and 36 sophomores in each of the schools. A total of 58,270 students participated in the base-year survey. Substitutions were made for non-cooperating schools—but not for students—in those strata where it was possible. Student and parent refusals and student absences resulted in an 84-percent return rate for the survey.

Several small groups in the population were oversampled to allow for special study of certain types of schools and students. Students completed questionnaires and took a battery of cognitive tests. In addition, a sample of parents of sophomores and seniors (about 3,600 for each cohort) was surveyed.

Nonresponse is calculated from the 9percent school nonresponse, a 16-percent student nonresponse, and the nonresponse rates for particular survey items. Examples of the sampling variability in the estimates from the HSB survey are given in table A4.

387

Table A4.—Standard errors of the estimated percent participating in selected programs of the "High School and Beyond" survey, 1980

Subgroup	Estimated percent	Standard error of estimated percent	90 percent confidence interval ± (1.65 × standard error)
All students	10 (or 90)	0.3	9.5 to 10.5 (89.5 to 90.5)
or whites	. 30 (or 70)	.4	29.3 to 30.7 (69.3 to 70.7)
	50	.5	49.2 to 50.8
Males or	10 (or 90)	.4	9.4 to 10.6 (89.4 to 90.6)
females	30 (or 70)	.4 .6 .6	29.0 to 31.0 (69.0 to 71.0)
	50	.6	49.0 to 51.0
Blacks	10 (or 90)	.7	8.8 to 11.2 (88.8 to 91.2)
	30 (or 70)	1.1	28.2 to 31.8 (68.2 to 71.8)
	50	1.2	48.1 to 51.9
Hispanics	10 (or 90)	.8	8.7 to 11.3 (88.7 to 91.3)
	30 (or 70)	1.2	28.0 to 32.0 (68.0 to 72.0)
	50	1.3	47.8 to 52.2

The standard error (se) of an individual percentage (p) can also be approximated by the formula

$$se_0 = 1.6\sqrt{p(100-p)/n}$$

where n is the sample size and 1.6 is a factor used to adjust for the particular sample design used in HSB. In evaluating a difference between two percentages, the standard error of the difference may be conservatively approximated by taking the square root of the sum of the squared standard errors of the two percentages. For example, the estimated percentage of low-socioeconomic-status seniors of 1982 participating in varsity athletics is 29 percent while the estimate for high-socioeconomicstatus seniors in varsity athletics is 44 percent, a difference of 15 percentage points. Using the formula and the sample sizes from table A5, the standard errors of the two percentages being compared are calculated to be:

$$1.6\sqrt{(29)(71)/6,752} = .884$$

$$1.6\sqrt{(44)(56)/6,341} = .997$$

The standard error of the difference is therefore

$$\sqrt{.884^2 + .997^2} = \sqrt{.781 + .994} = 1.33$$

The sampling error (95 chances in 100) of the difference is approximately double the standard error, or approximately 2.7 percentage points, and the 95 percent confidence interval for the difference is 15  $\pm$  2.7, or 12.3 to 17.7 percentage points.

The standard error estimation procedure outlined above does not compensate for survey item nonresponse, which is a source of nonsampling error. (Table A5 reflects the maximum number of responses that could be tabulated by demographic characteristic.) For example, of the 10,925 respondents in the 1984 followup survey of 1980 high school graduates, 372 or 3.4 percent did not respond to the particular question on whether they had ever used a pocket calculator. Item nonresponse varied considerably. A very low nonresponse rate of 0.1 percent was obtained for a question asking whether the respondent had attended a postsecondary institution. A much higher item nonresponse rate of 12.2 percent was obtained for a question asking if the respondent had used a micro- or minicomputer in high school. Typical item nonresponse rates ranged from 3 to 4 percent. Information on missing data for the classification variables appears in table A5.

As part of the first followup survey of "High School and Beyond," transcripts were requested in fall 1982 for an 18,152-member subsample of the sophomore cohort. Of the

<sup>&</sup>lt;sup>1</sup>Transcript study was collected from a sample of the high school class of 1980 who attended postsecondary institutions before 1984.

<sup>2</sup>The SES index is a composite of five equally weighted measures: father's

education, mother's aducation, family income, father's occupation, and presence of certain items in the respondent's household.

<sup>3</sup>Data are included under lowest quartile. --- Data not applicable.

15,941 transcripts actually obtained, 1,969 were excluded because the students had dropped out of school before graduation, 799 were excluded because they were incomplete, and 1,057 were excluded because the student graduated before 1982 or the transcript indicated neither a dropout status nor graduation. Thus 12,116 transcripts were utilized for the overall curriculum analysis. All courses in each transcript were assigned a six-digit code based

on A Classification of Secondary School Courses (developed by Evaluation Technologies, Inc. under contract with CES). Credits earned in each course were expressed in Carnegie units. (The Carnegie unit is a standard of measurement that represents one credit for the completion of a 1-year course. To receive credit for a course, the student must have received a passing grade—"pass," "D," or higher.) Students who transferred from public

to private schools or from private to public schools between their sophomore and senior years were eliminated from public/private analyses.

In order to compare academic progress in or out of school, the 1982 followup survey for the sophomore cohort included a test battery. Cognitive tests-like those employed in the baseyear survey-and questionnaires were administered to those out of school (dropouts and early graduates) as well as to those still in school, including those who had transferred to other schools. Questionnaires were completed by 28,119 (95 percent) of the 29,737 sample members and the test battery by 26,216 (88 percent).

In designing the senior cohort first followup survey, one of the goals was to reduce the size of the retained sample, while still keeping sufficient numbers of minorities to allow important policy analyses. A total of 11,227 (94 percent) of the 11,995 persons subsampled completed the questionnaire. Information was obtained about the respondents' school and employment experiences, family status, and attitudes and plans. Tests were not administered to this senior followup.

The sample for the second followup, which took place in spring 1984, consisted of 12,199 members of the senior cohort and about 15,000 members of the sophomore cohort. The completion rate for the senior cohort was 90 percent, and the completion rate for the sophomore cohort was 91 percent. Examples of sample sizes and standard errors for the persistence in postsecondary education tabulation in chapter III is contained in table A6.

The Hispanic analyses presented in this report relied on students' self-identification as members of one of four Hispanic subgroups: Mexican, Mexican-American, Chicano; Cuban, Cubano; Puerto-Rican, Puertorriqueno, or Boricua; or other Latin American, Latino, Hispanic, or Spanish descent.

A CES series of technical reports and data file users manuals provides additional information on the survey methodology. Further information on the "High School and Beyond" survey may be obtained from:

**Jeffrey Owings Education Outcomes Division** Center for Education Statistics 555 New Jersey Avenue, NW. Washington, DC 20208

Persisted in a proprietary, private technical school or junior college or a public technical school for 15 or more months.

## **Projections of Education Statistics**

Since 1964, CES has published *Projections* of Education Statistics. projecting for elementary and secondary schools and institutions of higher education key statistics including enrollments, instructional staff, graduates, and earned degrees. *Projections* includes several alternative projection series and a methodology section describing the techniques and assumptions used to prepare them. Data in this edition of the *Digest* reflect the intermediate *Projection* series only.

Differences between the reported and projected values are of course almost inevitable. An evaluation of past projections revealed that, at the elementary and secondary level, projections of enrollment have been quite accurate: Mean absolute percentage differences for enrollment were less than 1 percent for projections from 1 to 5 years into the future, while those for teachers were less than 4 percent. At the higher education level, projections of enrollment have been fairly accurate: Mean absolute percentage differences were 5 percent or less for projections from 1 to 5 years into the future.

Since projections of time series are subject to errors both by the nature of statistics and the properties of projection methodologies, users are cautioned not to place too much confidence in the numerical values of the projections. Important but unforeseeable economic and social changes may lead to differences, particularly at the higher education level. Rather, projections are to be considered as indicators of broad trends.

For further information about projection methodology and accuracy, contact:

Debra E. Gerald Condition of Education Division Center for Education Statistics 555 New Jersey Avenue, NW. Washington, DC 20208

#### National Assessment of Educational Progress

The National Assessment of Educational Progress (NAEP) is a cross-sectional study designed and initially implemented in 1969. Each year, NAEP has gathered information about selected levels of educational achievement across the country. NAEP has surveyed

the educational attainments of 9-, 13-, and 17year-olds and young adults (ages 25-35) in 10 learning areas. Different learning areas have been assessed every year, and all areas have been periodically reassessed in order to measure possible changes in educational achievement.

The reading assessment presented in this publication was designed by the Education Commission of the States and conducted by the Educational Testing Service. Multistage probability samples were used. The primary sampling units were stratified by region and, within region, by State, size of community, and, for the two smaller sizes of community strata, by socioeconomic level. Assessment exercises were administered either to individuals or to small groups of students by specially trained personnel.

Sample sizes for the reading proficiency portion of the 1984-85 NAEP study were 22,291 for the 9-year-olds, 22,693 for the 13-year-olds, and 25,193 for the 17-year-olds. Response rates were 92 percent, 90 percent, and 82 percent, respectively. Response rates for earlier years (1971, 1975, and 1980) were generally lower. For example, the lowest response rate for the 9-year-olds was 88 percent in 1975, and the lowest response rate over all was 70 percent for the 17-year-olds in 1975. Data on standard errors are provided in table A7.

The literacy assessment data used in this report are based on a nationally representative household sample of 21- to 25-year-olds. Blacks and Hispanics were oversampled to allow samples of sufficient size for reliable results. A total of 38,400 households were screened to locate 4,494 potential respondents. (No more than one person was surveyed from any one household.) Of the potential respondents, 3,618 young adults participated, resulting in a response rate of 80 percent. Table A8 contains standard errors for selected estimates.

Information from NAEP is subject to both nonsampling and sampling error. Two possible sources of nonsampling error are nonparticipation and instrumentation. Certain populations have been oversampled to assure samples of sufficient size for analysis. Instrumentation nonsampling error could result from failure of the NAEP assessment instruments to measure

Table A7.—Standard errors for the NAEP reading proficiency study, 1984-85

# Second International Mathematics Study

The "Second International Mathematics Study" was organized as a cooperative undertaking of research institutes in about 24 countries represented in the International Associa-

tion for Evaluation of Educational Achievement (IEA). Sample surveys of two population groups were conducted during the 1981-82 school year in 20 countries. Data were collected from school administrators, teachers, and students.

"Population A" included all students in the grade in which the majority of students had attained the age of 13.0 to 13.1 years by the middle of the school year. In all countries, school enrollment is nearly universal at that age, which represents the final year of elementary school for most countries. For the United States, Population A was the eighth grade. For Japan, the seventh grade was chosen for study because the cognitive mathematics tests were

more appropriate for that grade level.

"Population B" was defined as all students who were in the terminal grade of secondary education and who were studying mathematics as a substantial part of their academic program, taking at least 5 hours of mathematics classes each week. In the United States, classes of precalculus and calculus were chosen. These classes represented about 12 percent of the total age group. In other countries, Population B represented between 6 and 50 percent of the age group.

About 20 countries' educational systems participated in the Population A survey and 15 systems participated in the Population B survey. The 35 samples ranged in size from 1,000 to 8,800 students.

Because of the variations in student curriculum, survey design, and other factors from country to country, the results of this survey should be used with care. Further information on the sampling methodology and response rates is available from:

Larry E. Suter Education Outcomes Division Center for Education Statistics 555 New Jersey Avenue, NW. Washington, DC 20208

# Office for Civil Rights

# Civil Rights Survey of Elementary and Secondary Schools

The fall 1980 "Civil Rights Survey of Elementary and Secondary Schools" was conducted to obtain data on the characteristics of students enrolled in public schools throughout the Nation. The information is required by the U.S. Education Department's Office for Civil Rights (OCR) to fulfill its responsibilities under Title VI of the Civil Rights Act of 1964, Title IX of the Education Amendments of 1972, and Section 504 of the Rehabilitation Act of 1973. Some 5,000 school districts and 51,000 individual schools participated. School districts were not randomly selected; rather, districts warranting continued monitoring based on the 1978 survey were chosen along with a random sample of remaining districts with at least 300 students.

The 1984 survey followed a similar methodology, except that 3,510 school districts were sampled—2,250 with enrollment over 300 and 1,260 with enrollment under 300.

Claude LeTien Surveys Branch Office for Civil Rights 400 Maryland Avenue, SW. Washington, DC 20202

## Bureau of the Census

#### **Current Population Survey**

Current estimates of school enrollment as well as social and economic characteristics of students are based on data collected in the Census Bureau's monthly household survey of about 60,000 households. The monthly "Current Population Survey" (CPS) sample consists of 614 areas comprising 1,113 counties, independent cities, and minor civil divisions throughout the 50 States and the District of Columbia. The sample was initially selected from the 1970 census files and is periodically updated to reflect new housing construction when possible.

The monthly CPS deals primarily with labor force data for the civilian noninstitutional population (i.e., excluding military personnel and their families living on post and inmates of institutions). In addition, supplemental questions are asked about the education of all eligible members of the household. The October 1982 survey obtained information about highest grade completed, level of current enrollment, attendance status, number and type of courses, degree or certificate objective, and type of organization offering instruction. Information on enrollment status by grade is gathered each October.

The estimation procedure employed for the monthly CP3 data involves inflating weighted sample results to independent estimates of characteristics of the civilian noninstitutional population in the United States by age, sex, and race. These independent estimates are based on statistics from decennial censuses; statistics on Lirths, deaths, immigration, and

emigration; and statistics on the population in the armed services. Generalized standard error tables are provided in the *Current Population Reports*. The data are subject to both nonsampling and sampling errors.

Further information is available in the *Current Population Reports*. Series P-20, or by contacting:

Population Division
Bureau of the Census
U.S. Department of Commerce
Washington, DC 20233

School Enrollment. Each October, the "Current Population Survey" (CPS) includes supplemental questions on the enrollment status of the populations 3 years old and over. The main sources of nonsampling variability in the responses to the supplement are those inherent in the survey instrument. The question concerning educational attainment may be sensitive for some respondents, who may not want to acknowledge the lack of a high school

diploma. The question of current enrollment may not be answered accurately for various reasons. Some respondents may not know current grade information for every student in the household, a problem especially prevalent for households with members in college or in nursery school. Confusion over college credits or hours taken by a student may make it difficult to determine the year in which the student is enrolled. Problems may occur with the definition of nursery school (a group or class organized to provide educational experiences for children) where respondents' interpretations of "educational experiences" vary.

Examples of sampling variability in the estimates of school enrollment rates are given in table A9. Questions concerning the CPS "School Enrollment" survey may be directed to:

Education and Social Stratification Branch Bureau of the Census U.S. Department of Commerce Washington, DC 20233

Table A10.—Estimated educational attainment rates and standard	j
errors in the March "Current Population Survey"	

Estimate	Base of percentage, in thousands	Standard error	90 percent confidence interval
2 or 98 ¹	100	2.00	0 to 5.2
	100,000	0.06	1.9 to 2.1
10 or 90	100	4.30	3.1 to 16.9
	100,000	0.14	9.8 to 10.2
50	100	7.20	38.5 to 61.5
Į.	100,000	0.20	49.7 to 50.3

<sup>1</sup>The confidence interval for the larger values can be found by taking the complement of that shown, e.g. for 98 it would be 94.8 to 100.

Educational Attainment. Data on years of school completed are derived from two questions on the "Current Population Survey" (CPS) instrument. Formal reports documenting educational attainment are produced by the Bureau of the Census using March CPS results. The latest report is "Educational Attainment in the United States, 1981 and 1980," Series P-20, No. 390, which is available from the Government Printing Office. Data for 1982 through 1985 may be obtained from the Bureau of the Census.

In addition to the general constraints of the CPS, some data indicate that the respondents have a tendency to overestimate the educational level of members of their household. Some inaccuracy is due to a lack of the respondent's knowledge of the exact educational attainment of each household member and the hesitancy to acknowledge anything less than a high school education. Another cause of nonsampling variability is the change in the numbers in the armed services over the years. In 1970, 25 percent of all males 20 and 21 years old were in the armed services. By 1974, this had decreased to less than 10 percent. The exclusion of members of the armed services appears to increase the proportion of the CPS population with some college and decrease the proportion of those who finished high school but went no further. After 1974, there was more stability in the proportion of young men in the military.

Beginning with the data for March 1980, tabulations have been controlled for the 1980 census. Examples of the sampling variability in the estimates of educational attainment are given in table A10. The figures shown in the table hold for total or white population estimates only. The variability in estimates for subgroups (region, household relationships, etc.) can be estimated using the tables presented in *Current Population Reports*. Questions concerning "Educational Attainment in the United States" may be directed to:

Education and Social Stratification Branch Bureau of the Census U.S. Department of Commerce Washington, DC 20233

Participation in Adult Education Survey. In May of 1969, 1972, 1975, 1978, 1981, and 1984, the "Current Population Survey" (CPS) included a supplemental inquiry on "Participation in Adult Education" (PAE). In addition to the questions on the CPS, interviewers asked if anyone in the household 17 years of age or older had participated in adult education in the 12-month period prior to the survey date. A survey form was filled out by the interviewer or left with a proxy member of the household for participants who were not at home at the time of the interview. In 1981, the supplement form was no longer left with the proxy but completed by the interviewer.

The PAE response rate of 94 percent in 1981 must be viewed in conjunction with the 96-

Table A11.—Estimated standard errors for selected estimates of persons from the "Participation in Adult Education" CPS supplement

Estimate	Standard error	90 percent confidence interval
10	4.5	2.8 to 17.2
50	10.2	33.7 to 66.3
500	30.0	452 to 548
50,000	253.0	49,595 to 50,405

Table A12.—Estimated participation rates and standard errors in the "Participation in Adult Education" CPS supplement

Estimate	Base of percentage, in thousands	Standard error	90 percent confidence interval
l or 99 ¹	50	2.4	0 to 4.0
	5,000	0.2	0.68 to 1.3
0 or 90	50	7.1	0 to 21.4
	5,000	0.7	8.9 to 11.
0	50	11.8	31.1 to 68.4
	5.000	1.2	48.1 to 51.5

<sup>&#</sup>x27;The confidence interval for the larger values can be found by taking the complement of that shown, e.g., for 99 it would be 95.2 to 100.

percent response rate of the CPS. The overall response rate for the PAE survey in 1981 is then 90 percent. Examples of the sampling variability in the estimates from the PAE survey are given in tables A11 and A12.

The figures shown in the tables hold for total or white population estimates only. The variability in estimates for subgroups (employment status, income, education, etc.) can be estimated using the tables in *Current Population Reports*. Further information concerning the PAE survey may be obtained from:

Postsecondary Education Statistics Division Center for Education Statistics 555 New Jersey Avenue, NW. Washington, DC 20208

# National Institute on Drug Abuse

The National Institute on Drug Abuse of the U.S. Department of Health and Human Services is the primary supporter of the long-term

study entitled "Monitoring the Future: A Continuing Study of the Lifestyles and Values of Youth," conducted at the University of Michigan, Institute for Social Research. One component of the study deals with student drug abuse. Results of a national sample survey have been published annually since 1975. Approximately 125 to 135 schools have participated each year. For the class of 1985, 16,502 students were sampled, and 84 percent responded. For earlier years, the response rate varied from 77 to 84 percent. One example of the survey's sampling error was the percent of students who had ever used marijuana or hashish: The estimate is 54.2 percent and the 95-percent confidence limits are 52.0 to 56.4 percent.

The data in this survey represent only high school seniors. Understandably, there will be some reluctance to admit illegal activities. Also, students who were out of school on the day of the survey were nonrespondents. The survey did not include high school dropouts. The inclusion of these two groups would tend

to increase the proportion of individuals who had used drugs. A 1983 study found that the inclusion of the absentees could increase some of the drug usage estimates by as much as 2.7 percent. (Details on that study and its methodology were published in *Drug Use Among American High School Students, College Students, and Other Young Adults,* by Lloyd D. Johnston, Patrick M. O'Malley, and Jerald G. Bachman, available from the National Clearinghouse on Drug Abuse Information, 5600 Fishers Lane. Rockville, MD 20857.) Further information on this survey may be obtained from:

National Institute of Drug Abuse Division of Epidemiology and Statistical Analysis 5600 Fishers Lane Rockville, MD 20857

# **National Science Foundation**

# Federal Obligations to Colleges and Universities and Selected Nonprofit Institutions

Each year the National Science Foundation collects data on obligations to colleges and universities from Federal agencies. Obligations differ from expenditures in that funds obligated during one fiscal year may be spent by the recipient in later years. The fiscal year 1983 data were submitted by 15 Federal agencies. Obligation amounts include direct Federal support, so that amounts subcontracted to other institutions are included. Those funds received through subcontracts are excluded. Also excluded from the data are certain types of financial assistance such as the Department of Education's Guaranteed Student Loan Program and obligations to the U.S. service academies. For purposes of tabulations in this publication, university administered federally funded research and development centers (FFRDC's) have been included in appropriate State totals.

The universe of academic institutions for this survey is based on the Higher Education General Information Survey conducted by the Center for Education Statistics (see above). Institutions without Federal support were excluded and some systems were combined into single reporting units. Further information on this

survey may be obtained from Federal Support to Universities. Colleges. and Selected Nonprofit Institutions. published by the National Science Foundation or by contacting:

Universities and Nonprofit Institutions Study Group

Division of Science Resources Studies National Science Foundation, Room L-602 Washington, DC 20550

## Survey of Scientific and Engineering Expenditures at Universities and Colleges

The universe for this survey included 563 institutions in the United States and outlying areas that had a master's or doctor's degree program in the sciences or engineering. In addition, schools that had \$50,000 or more in separately budgeted research and development expenditures and 19 federally funded research and development centers were included. All together, these institutions represented approximately 99 percent of all college and university research and development.

The survey instrument has remained essentially unchanged in recent years to facilitate consistent responses. The field of study details match the standard field codes in the Classification of Instructional Programs, published by CES. The response rate for the 1982 survey was 81 percent. The remaining institutions were imputed. The imputation amounted to only 6 percent of the total expenditures reported, since the nonrespondents tended to be smaller institutions. The survey process included a verification procedure in which trend data for the past two reports and the current survey were sent to each institution. The institutions were given an opportunity to amend the current and past figures. These revisions have been incorporated in the National Science Foundation data base.

Further information on this survey may be obtained from Academic Science/Engineering. R&D Funds, published by the National Science Foundation, or by contacting:

Universities and Nonprofit Institutions
Study Group
Division of Science Resources Studies
National Science Foundation, Room L-602
Washington, DC 20550

# **Other Organization Sources**

# **College Entrance Examination Board**

The Admissions Testing Program of the College Board comprises a number of college admissions tests, including the Preliminary Scholastic Aptitude Test (PSAT) and the Scholastic Aptitude Test (SAT). High school students participate in the testing program as sophomores, juniors, or seniors—some more than once during these 3 years. If they have taken the tests more than once, only the most recent scores are tabulated. The PSAT and SAT report subscores in the areas of mathematics and verbal ability.

The SAT results are not representative of high school students or college-bound students nationally since the sample is self-selected. Generally tests are taken by students who need the results to attend a particular college or university. The State totals are greatly affected by the requirements of its State colleges. Public colleges in a number of States require ACT scores rather than SAT scores. Thus the proportion of students taking the SAT in these States is very low and is inappropriate for any comparison. In recent years about 1 million high school students have taken the examination annually.

Further information on the SAT can be obtained from:

College Entrance Examination Board Educational Testing Service Princeton, NJ 08541

### Gallup Poll

Each year the Gallup Poll conducts the "Public Attitudes Toward the Public Schools" survey, funded by the Institute for Development of Educational Activities, Inc. (IDEA). The survey includes interviews with approximately 1,600 adults representing the civilian noninstitutional population 18 years old and over.

The sample used in the 12th annual survey was made up of a total of 1,528 respondents and is described as a modified probability sample of the Nation. Personal, in-home interviewing was conducted in representative areas of the Nation and types of communities.

Further information on this survey can be obtained from:

IDEA—Kettering Information and Services P.O. Box 446 Melbourne, FL 32901

## Institute of International Education

Each year the Institute of International Education (IIE) conducts a survey of the number of foreign students studying in American colleges and universities and reports these data in Open Doors, an annual publication. All of the regionally accredited institutions in the Education Directory, Colleges and Universities published by CES are surveyed by IIE. The data presented in the Digest are drawn from the IIE two-part survey. The first part of the survey requests the total enrollment of foreign students in an institution. For the 1984-85 survey. 2,766 out of 2,833 (98 percent) institutions surveyed reported data for the first part of the survey. The second part of the questionnaire asked for information on student characteristics, such as country of origin. The response rate for this portion of the study was 91 percent in 1984-85. For those institutions not reporting data for part two of the survey, distributions by country of origin were estimated by applying distributions from the reporting institutions.

Additional information can be obtained from the publication *Open Doors* or by contacting:

Alfred Julian Institute of International Education 809 United Nations Plaza New York, NY 10017

# Market Data Retrieval

Market Data Retrieval is a market research company that compiles mailing lists of schools and school districts. They also conduct special analyses of school characteristics. In the last few years they have conducted surveys of computer use in public and private schools.

During its annual summer survey of public school districts, Market Data Retrieval included questions on computer use in public schools. All the school districts were contacted about

the number of their schools using computers. In the fall, an additional mail survey was conducted to gather more information on the number and type of computers being used. Data on computer utilization were reported for 86 percent of public schools. These data were used to generate State-by-State estimates which were aggregated to construct a national total.

Private school data were compiled through mail and telephone surveys during the middle of the 1982-83 and 1983-84 school years. The 1983-84 response rate for the Catholic schools was 96 percent, and the rate for the other private schools was 89 percent.

Further information on these surveys may be obtained from:

Market Data Retrieval 16 Progress Drive Shelton, CT 06484

# Metropolitan Life Insurance Company

The 1985 "Metropolitan Life Survey of the American Teacher" was conducted by Louis Harris and Associates for Metropolitan Life Insurance Company. A total of 1,846 telephone interviews were conducted through April 8, 1985 and June 8, 1985. The teachers came from all types of public schools throughout the United States.

The survey sample was drawn at random from a list of 1.2 million current teachers compiled by Market Data Retrieval. Sample sizes for completed interviews were set for each State, based on the proportion of elementary and secondary public school classroom teachers in the State. The State sample sizes were based on statistics published by the Center for Education Statistics.

Each selected current teacher was contacted at his or her school and requested to participate in the survey. Forty-seven percent of those teachers contacted participated in the survey.

Further information may be obtained from:

Metropolitan Life Survey of the American Teacher Metropolitan Life Insurance Company One Madison Avenue New York, NY 10010

#### **National Education Association**

#### Estimates of School Statistics

The National Education Association (NEA) reports revenues and expenditure data in its annual publication, Estimates of School Statistics. Each year NEA prepares regression-based estimates of financial and other education statistics and submits them to the States for verification. Generally about 30 States adjust these estimates based on their own data. These preliminary data are published by NEA along with revised data from previous years. States are asked to revise previously submitted data as final figures become available. The most recent publication contains all changes reported to the NEA.

Some *Digest* tables use revised estimates of financial data prepared by NEA because it was the most current source. Since expenditure data reported to CES must be certified for use in Department of Education formula grant programs (such as Chapter I of the Education Consolidation and Improvement Act), CES data are not available as soon as NEA estimates.

Further information on NEA surveys can be obtained from:

National Education Association—Research 1201 16th Street, NW. Washington, DC 20036

#### Status of the American Public School Teacher

The "Status of the American Public School Teacher" survey is conducted every 5 years by the National Education Association (NEA). The survey was designed by the NEA Research Division and initially administered in 1956. The intent of the survey is to solicit information covering various aspects of public school teachers' professional, family, and civic lives.

Participants for the survey are selected using a two-stage sample design, with the first-stage stratum determined by the number of students enrolled in the districts. Selection probabilities are determined so that the resulting sample is self-weighting. In 1980-81, a sample of 1,768 was selected from the approximately 2,185,000 public school teachers, and 1,326 usable replies were obtained, yielding a response rate of 75 percent.

Table A13.—Maximum differences required for significance (90 percent confidence level) between sample subgroups of the "Status of the American Public School Teacher" survey

	Size of Other Subgroup						
Size of one subgroup	100	200	300	400	500	600	70
00	11.6	10.1	9.5	9.2	9.0	8.9	8.8
00	10.1	8.2	7.5	7.1	6.9	6.7	6.0
0	9.5	7.5	6.7	6.3	6.0	5.8	5.
0	9.2	7.1	6.3	5.8	5.5	5.3	5. 5.3
0	9.0	6.9	6.0	5.5	5.2	5.0	4.8
0	8.9	6.7	5.8	5.3	5.0	4.7	4.0
0	8,8	6.6	5.7	5.2	4.8	4.6	4.

Possible sources of nonsampling errors are nonresponses, misinterpretation, and—when comparing data over years—changes in the sampling method and instrument. Misinterpretation of the survey items should be minimal, as the sample responding is not from the general population but one knowledgeable about the area of concern. Since the sampling procedure changed after 1956, and some wording of items has changed over the different administrations, care is taken to present only comparable data.

Since sampling is used, sampling variability is inherent in the data. An approximation to the maximum standard error for estimating the population percentages is 1.4 percent. To estimate the population percentage with 90 percent confidence, the maximum standard error of 1.4 percent is multiplied by 1.65 (0.014  $\times$  1.65 = 0.023) to produce the largest error associated with any single sample proportion (2.3 percent). For example, if a sample percentage is 60 percent, there is a 90 percent chance that the population percentage lies between 57.7 percent and 62.3 percent (60 percent  $\pm$  2.3 percent). If comparisons of two percentages are to be made, table A13 gives maximum differences for significance at the 90 percent confidence level.

Questions concerning the "Status of the American Public School Teacher" survey may be directed to:

National Education Association—Research Research Division 1201 16th Street, NW. Washington, DC 20036

### United Nations Educational, Scientific, and Cultural Organization

### Statistical Yearbook

The United Nations Educational, Scientific, and Cultural Organization (UNESCO) conducts annual surveys of education statistics of its member countries. Besides official surveys, data are supplemented by information obtained by UNESCO through other publications and sources. Each year about 200 countries reply to the UNESCO surveys. In some cases, estimates are made by UNESCO for particular items such as world and continent totals. While great efforts are made to make the data as comparable as possible, the data will still reflect the vast differences among the countries of the world in the structure of education. While there is some agreement about the reporting of first- and second-level data, the third level (postsecondary education) presents numerous substantial problems. Some countries report only university enrollment while other countries report all postsecondary, including vocational and technical schools and correspondence programs. A very high proportion of some countries' third-level students attend institutions in other countries. While definitional problems are many in this sort of study, other survey problems should not be overlooked. The member countries that provide data to UNESCO are responsible for the validity of their data. Thus data for particular countries are subject to nonsampling error and perhaps sampling error as well. Some countries may furnish only rough estimates while data from

100

### 342 GUIDE TO SOURCES

other countries may be very accurate. Other difficulties are caused by the varying periodicity of data collection among the countries of the world. In spite of such problems, many researchers use UNESCO data because they are the best available. Users should examine footnotes carefully to recognize some of the data limitations.

More complete information may be obtained from the *Statistical Yearbook* published by UNESCO or from:

Office of Statistics UNESCO 75700 Paris France

### **Definitions**

Academic support This category of college expenditures includes expenditures for support services that are an integral part of the institution's primary missions of instruction, research, or public service. Includes expenditures for libraries, galleries, audio/visual services, academic computing support, ancillary support, academic administration, personnel development, and course and curriculum development.

Achievement test An examination that measures the extent to which a person has acquired certain information or mastered certain skills, usually as a result of specific instruction.

Agriculture Courses designed to improve competencies in agricultural occupations. Included is the study of agricultural production, supplies, mechanization and products, agricultural science, forestry, and related services.

**Appropriation** An amount (other than a grant or contract) received from or made available to an institution through an act of a legislative body.

Associate degree A degree granted for the successful completion of a subbaccalaureate program of studies, usually requiring at least 2 years (or equivalent) of full-time college-level study. This includes degrees granted in a cooperative or work/study program.

Auxiliary enterprises This category includes those essentially self-supporting operations which exist to furnish a service to students, faculty, or staff and which charge a fee that is directly related to, although not necessarily equal to, the cost of the service. Examples are residence halls, food services, college stores, and intercollegiate athletics.

Average daily attendance (ADA) The aggregate attendance of a school during a reporting period (normally a school year) divided by the number of days school is in session during this period. Only days on which the pupils are under the guidance and direction of teachers should be considered days in session.

Average daily membership (ADM) The aggregate membership of a school during a reporting period (normally a school year) divided by the number of days school is in session during this period. Only days on which the pupils are under the guidance and direction of teachers should be considered as days in session. The average daily membership for groups of schools having varying lengths of terms is the average of the average daily memberships obtained for the individual schools.

**Bachelor's degree** A degree granted for the successful completion of a baccalaureate program of studies, usually requiring at least 4 years (or equivalent) of full-time college-level study. This includes degrees granted in a cooperative or work/study program.

**Business** Program of instruction that prepares individuals for a variety of activities in planning, organizing, directing, and controlling business office systems and procedures.

**Carnegie unit** A standard of measurement that represents one credit for the completion of a 1-year course.

Catholic school A private school over which in most cases a parent Catholic church group exercises some control or to which it provides some form of subsidy. Catholic schools include those affiliated with the Roman Catholic Church, including the "independent" Catholic schools operated by religious orders.

Central cities The largest cities, with 50,000 or more inhabitants, in a Standard Metropolitan Statistical Area (SMSA). A smaller city within a SMSA may also qualify if it has at least 25,000 inhabitants or has a population of one-third or more of that of the largest city and a minimum population of 25,000. An exception occurs where two cities have contiguous boundaries and constitute, for economic and social purposes, a single community of at least 50,000, the smaller of which must have a population of at least 15,000.

402

Cless size The membership of a class on a given date.

Classroom teacher A staff member assigned the professional activities of instructing pupils in self-contained classes or courses, or in classroom situations. Usually expressed in full-time equivalents.

**Cohort** A group of individuals who have a statistical factor in common, for example, year of birth.

College A postsecondary school which offers general or liberal arts education, usually leading to an associate, bachelor's, master's, doctor's, or first-professional degree. Junior colleges and community colleges are included under this terminology.

Combined elementary and secondary school A school which encompasses instruction at both the elementary and the secondary levels. Examples of combined elementary and secondary school grade spans would be 1 through 12 or 5 through 12.

**Computer science** A group of instructional programs that describes computer and information sciences, including computer programming, data processing, and information systems.

Constant dollars Dollar amounts that have been adjusted by means of price and cost indexes to eliminate inflationary factors and allow direct comparison across years.

Consumer, personal, and miscellaneous services A group of instructional programs that describes the fundamental skills a person is normally thought to need in order to function productively in society. Some examples are child development, consumer education, and family relations.

Consumer price index (CPI) This price index measures the average change in the cost of a fixed market basket of goods and services purchased by consumers.

**Consumption** That portion of income which is spent on the purchase of goods and services rather than being saved.

Credit The unit of value, awarded for the successful completion of certain courses, intended to indicate the quantity of course instruction in relation to the total requirements

for a diploma, certificate, or degree. Credits are frequently expressed in terms such as "Carnegie units," "semester credit hours," and "quarter credit hours."

Current dollars Dollar amounts that have not been adjusted to compensate for inflation.

Current expenditures (elementary/secondery) The expenditures for operating local public schools excluding capital outlay and interest on school debt. These expenditures include such items as salaries for school personnel, fixed charges, student transportation, school books and materials, and energy costs. Beginning in 1980-81, expenditures for State administration are excluded.

Current expenditures per pupil in average daily attendance Current expenditures for the regular school term divided by the average daily attendance of full-time pupils (or full-time equivalency of pupils) during the term. See also Current expenditures and Average daily attendance.

Current-fund expenditures (higher education) Money spent to meet current operating costs, including salaries, wages, utilities, student services, public services, research libraries, scholarships and fellowships, auxiliary enterprises, hospitals, and independent operations. Excludes loans, capital expenditures, and investments.

Current-fund revenues (higher education) Money received during the current fiscal year from revenue which can be used to pay obligations currently due, and surpluses reappropriated for the current fiscal year.

**Current Population Survey** See Guide to Sources.

Disposable personal income Current income received by persons less their contributions for social insurance, personal tax, and nontax payments. It is the income available to persons for spending and saving. Nontax payments include passport fees, fines and penalties, donations, and tuitions and fees paid to schools and hospitals operated mainly by the government. See also Personal income.

**Doctor's degree** An earned degree carrying the title of Doctor. The Doctor of Philosophy degree (Ph.D.) is the highest academic degree and requires mastery within a field of knowl-

edge and demonstrated ability to perform scholarly research. Other doctorates are awarded for fulfilling specialized requirements in professional fields, such as education (Ed.D.), musical arts (D.M.A.), business administration (D.B.A.), and engineering (D.Eng. or D.E.S.). Many doctor's degrees in both academic and professional fields require an earned master's degree as a prerequisite. First-professional degrees, such as M.D. and D.D.S., are not included under this heading.

Educational attainment The highest grade of regular school attended and completed.

Educational and general expenditures The sum of current funds expenditures on instruction, research, public service, academic support, student services, institutional support, operation and maintenance of plant, and awards from restricted and unrestricted funds.

Elementary education/programs Learning experiences concerned with the knowledge, skills, appreciations, attitudes, and behavioral characteristics which are considered to be needed by all pupils in terms of their awareness of life within our culture and the world of work, and which normally may be achieved during the elementary school years (usually kindergarten through grade 8 or kindergarten through grade 6) as defined by applicable State laws and regulations.

Elementary school A school classified as elementary by State and local practice and composed of any span of grades not above grade 8. A preschool or kindergarten school is included under this heading only if it is an integral part of an elementary school or a regularly established school system.

Elementary/secondary school As reported in this publication, includes only regular school, i.e., schools that are part of State and local school systems, and also most not-for-profit private elementary/secondary schools, both religiously affiliated and nonsectarian. Schools not reported include subcollegiate departments of institutions of higher education, residential schools for exceptional children, Federal schools for Indians, and Federal schools on military posts and other Federal installations.

**Employment** Includes civilian, noninstitutional persons who (1) worked during any part

of the survey week as paid employees; worked in their own business, profession, or farm; or worked 15 hours or more as unpaid workers in a family-owned enterprise; or (2) were not working but had jobs or businesses from which they were temporarily absent due to illness, bad weather, vacation, labor-management dispute, or personal reasons—whether or not they were seeking another job.

A trust fund set aside to pro-Endowment vide a perpetual source of revenue from the proceeds of the endowment investments. Endowment funds are often created by donations from benefactors of an institution, who may designate the use of the endowment revenue. Normally, institutions or their representatives manage the investments, but they are not permitted to spend the endowment fund itself, only the proceeds from the investments. Typical uses of endowments would be an endowed chair for a particular department or for a scholarship fund. Endowment totals tabulated in this book also include funds functioning as endowments such as funds left over from the previous year and placed with the endowment investments by the institution. These funds may be withdrawn by the institution and spent as current-funds at any time. Endowments are evaluated by two different measures, book value and market value. Book value is the purchase price of the endowment investment. Market value is the current worth of the endowment investment. Thus the book value of a stock held in an endowment fund would be the purchase price of the stock. The market value of the stock would be its selling price as of a given day.

**English** A group of instructional programs that describes the English language arts, including composition, creative writing, and the study of literature.

**Enrollment** The total number of students registered in a given school unit at a given time, generally in the fall of a year.

Expenditures Charges incurred, whether paid or unpaid, which are presumed to benefit the current fiscal year. For elementary/secondary schools, these include all charges for current outlays plus capital outlays and interest on school debt. For institutions of higher education, these include current outlays plus capital outlays. For government, these include charges

net of recoveries and other correcting transactions other than for retirement of debt, investment in securities, extension of credit, or as agency transaction. Government expenditures include only external transactions, such as the provision of perquisites or other payments in kind. Aggregates for groups of governments exclude intergovernmental transactions among the governments.

**Expenditures per pupil** Charges incurred for a particular period of time divided by a student unit of measure, such as average daily attendance or average daily membership.

Family A group of two persons or more (one of whom is the householder) related by birth, marriage, or adoption and residing together. All such persons (incuded related subfamily members) are considered as members of one family.

First-professional degree A degree that signifies both completion of the academic requirements for beginning practice in a given profession and a level of professional skill beyond that normally required for a bachelor's degree. This degree usually is based on a program requiring at least 2 academic years of work prior to entrance and a total of at least 6 academic years of work to complete the degree program, including both prior-required college work and the professional program: itself. By CES definition, first-professional degrees are awarded in the fields of dentistry (D.D.S. or D.M.D.), medicine (M.D.), optometry (O.D.), osteopathic medicine (D.O.), pharmacy (D.Phar.), podiatric medicine (D.P.M.), veterinary medicine (D.V.M.), chiropractic (D.C. or D.C.M.), law-(J.D.), and theological professions (M.Div. or M.H.L.).

First-professional enrollment The number of students enrolled in a professional school or program which requires at least 2 years of academic college work for entrance and a total of at least 6 years for a degree. By CES definition, first-professional enrollment includes only students in certain programs. (See First-professional degree for a list of programs.)

Foreign languages A group of instructional programs that describes the structure and use of language that is common or indigenous to people of the same community or nation, the same geographical area, or the same cultural traditions. Programs cover such features as

sound, literature, syntax, phonology, semantics, sentences, prose, and verse, as well as the development of skills and attitudes used in communicating and evaluating thoughts and feelings through oral and written language.

Full-time-equivalent (FTE) enrollment For institutions of higher education, enrollment of full-time students, plus the full-time equivalent of part-time students as reported by institutions. In the absence of an equivalent reported by an institution, the FTE enrollment is estimated by adding one-third of part-time enrollment to full-time anrollment.

Full-time instructional faculty Those members of the instruction/research staff who are employed full-time as defined by the institution, including faculty with released time for research and faculty on sabbatical leave. Fulltime counts exclude faculty who are employed to teach less than two semesters, three quarters, two trimesters, or two 4-month sessions: replacements for faculty on sabbatical leave or those on leave without pay; faculty for preclinical and clinical medicine; faculty who are donating their services; faculty who are members of military organizations and paid on a different pay scale from civilian employees; academic officers, whose primary duties are administrative; and graduate students who assist in the instruction of courses.

**Full-time enrollment** The number of students enrolled in higher education courses with total credit load equal to at least 75 percent of the normal full-time course load.

Full-time worker In educational institutions, an employee whose position requires peing on the job on school days throughout the school year at least the number of hours the schools are in session. For higher education, a member of an educational institution's staff who is employed full-time.

**General educational development (GED) program** Academic instruction to prepare persons to take the high school equivalency examination. See GED recipient.

GED recipient A person who has obtained certification of high school equivalency by meeting State requirements and passing an approved exam, which is intended to provide an appraisal of the person's achievement or performance in the broad subject matter areas usually required for high school graduation.

Midwa

General program A program of studies designed to prepare students for the common activities of a citizen, family member, and worker. A general program of studies may include instruction in both academic and vocationa! areas.

Geographic region 1) One of four regions used by the Bureau of the Economic Analysis of the U.S. Department of Commerce, the National Assessment of Educational Progress, and the National Education Association, as follows: (The National Education Association designated the Central region as Middle region in its classification.)

Government appropriation An amount (other than a grant or contract) received from or made available to an institution through an act of a legislative body.

Government grant or contract Revenues from a government agency for a specific research project or other program.

Graduate An individual who has received formal recognition for the successful completion of a prescribed program of studies.

Graduate enrollment The number of students who hold the bachelor's or first-professional degree, or the equivalent, and who are working towards a master's or doctor's degree.

First-professional students are counted separately. These enrollment data measure those students who are registered at a particular time during the fall. At some institutions, graduate enrollment also includes students who are in postbaccalaureate classes but not in degree programs. In specified tables, graduate enrollment includes all students in regular graduate programs and all students in postbaccalaureate classes but not in degree programs (unclassified postbaccalaureate students).

Graduate Record Examination (GRE) Multiple-choice examinations administered by the Educational Testing Service and taken by college students who are intending to attend certain graduate schools. The tests are offered in a variety of subject areas. Ordinarily, a student will take only the exam that applies to the intended field of study.

**Graduation** Formal recognition given an individual for the successful completion of a prescribed program of studies.

Gross national product (GNP) national output of goods and services valued at market prices. GNP can be viewed in terms of expenditure categories which include purchases of goods and services by consumers and government, gross private domestic investment, and net exports of goods and services. The goods and services included are largely those bought for final use (excluding illegal transactions) in the market economy. A number of inclusions, however, represent imputed values, the most important of which is rental value or owner-occupied housing. GNP, in this broad context, measures the output attributable to the factors of production—labor and property-supplied by U.S. residents.

Handicapped Those children evaluated as having any of the following impairments, who because of these impairments need special education and related services. (These definitions apply specifically to data from the U.S. Office of Special Education and Rehabilitative Services presented in this publication.)

**Deaf** Having a hearing impairment which is so severe that the student is impaired in processing linguistic information through hearing (with or without amplification) and which adversely affects educational performance.

**Deaf-blind** Having concomitant hearing and visual impairments which cause such severe communication and other developmental and educational problems that the student cannot be accommodated in special education programs solely for deaf or blind students.

Hard of hearing Having a hearing impairment, whether permanent or fluctuating, which adversely affects the student's educational performance but which is not included under the definition of "deaf" in this section.

Mentally retarded Having significantly subaverage general intellectual functioning, existing concurrently with defects in adaptive behavior and manifested during the developmental period, which adversely affects the child's educational performance.

Multihandicapped Having concomitant impairments (such as mentally retarded-blind, mentally retarded-orthopedically impaired, etc.), the combination of which causes such severe educational problems that the student cannot be accommodated in special education programs solely for one of the impairments. Term does not include deaf-blind students but does include those students who are severely or profoundly mentally retarded.

Orthopedically impaired Having a severe orthopedic impairment which adversely affects a student's educational performance. The term includes impairment resulting from congenital anomaly, disease, or other causes.

Other health impaired Having limited strength, vitality, or alertness—due to chronic or acute health problems such as a heart condition, tuberculosis, rheumatic fever, nephritis, asthma, sickle cell anemia, hemophilia, epilepsy, lead poisoning, leukemia, or diabetes—which adversely affects the student's educational performance.

Seriously emotionally disturbed Exhibiting one or more of the following characteristics over a long period of time, to a marked degree, and adversely affecting educational performance: an inability to learn which cannot be explained by intellectual, sensory, or health factor; an inability to build or maintain satisfactory interpersonal relationships

with peers and teachers; inappropriate types of behavior or feelings under normal circumstances; a general pervasive mood of unhappiness or depression; or a tendency to develop physical symptoms or fears associated with personal or school problems. This term does not include children who are socially maladjusted, unless they also display one or more of the listed characteristics.

Specific learning disabled Having a disorder in one or more of the basic psychological processes involved in understanding or in using spoken or written language, which may manifest itself in an imperfect ability to listen, think, speak, read, write, spell, or do mathematical calculations. The term includes such conditions as perceptual handicaps, brain injury, minimal brain dysfunction, dyslexia, and developmental asphasia. The term does not include children who have learning problems which are primarily the result of visual, hearing, or environmental, cultural, or economic disadvantage.

**Speech impaired** Having a communication disorder, such as stuttering, impaired articulation, language impairment, or voice impairment, which adversely affects the student's educational performance.

Visually handicapped Having a visual impairment which, even with correction, adversely affects the student's educational performance. The term includes partially seeing and blind children.

**Higher education** Study beyond secondary school at an institution that offers programs terminating in an associate, baccalaureate, or higher degree.

# Higher education institutions (new classification):

**Doctoral-granting** Characterized by a significant level and breadth of activity in commitment to doctoral-level education as measured by the number of doctorate recipients and the diversity in doctoral-level program offerings.

Comprehensive Characterized by diverse postbaccalaureate programs (including first-professional) but not engaged in significant doctoral-level education.

General baccalaureate Characterized by primary emphasis on general undergradu-

ate, baccalaureate-level education. Not significantly engaged in postbaccalaureate education.

**Specialized** Baccalaureate or postbaccalaureate institution emphasizing one area (plus closely related specialties), such as business or engineering. The programmatic emphasis is measured by the percentage of degrees granted in the program area.

2-year Conferring at least 75 percent of its degrees and awards for work below the bachelor's level.

**New** These institutions, though not necessarily newly organized, are new additions to the "Higher Education General Information Survey" universe. When degree and award data become available, they will be reclassified.

**Non-degree-granting** Offering undergraduate or graduate study but not conferring degrees or awards. In this volume these institutions are included under Specialized.

## Higher education institutions (traditional classification):

4-vear institution An institution legally authorized to offer and offering at least a 4-year program of college-level studies wholly or principally creditable toward a baccalaureate degree. In some tables a further division between universities and other 4-year institutions is made. A "university" is a postsecondary institution which typically comprises one or more graduate professional schools (also see University). For purposes of trend comparisons in this volume, the selection of universities has been held constant for all tabulations after 1982. "Other 4-year institutions" would include the rest of the nonuniversity 4-year institutions.

**2-year institution** An institution legally authorized to offer and offering at least a 2-year program of college-level studies which terminates in an associate degree or is principally creditable toward a baccalaureate degree.

Higher education price index A price index which measures average changes in the prices of goods and services purchased by colleges and universities through current-fund education and general expenditures (excluding

expenditures for sponsored research and auxiliary enterprises).

High school A secondary school offering the final years of high school work necessary for graduation, usually including grades 10, 11, 12 (in a 6-3-3 plan) or grades 9, 10, 11, and 12 (in a 6-2-4 plan).

Household All the persons who occupy a housing unit. A house, apartment, or other group of rooms, or a single room, is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the occupants do not live and eat with any other persons in the structure, and there is direct access from the outside or through a common hall.

Income tax Taxes levied on net income, that is, by gross income less certain deductions permitted by law. These taxes can be levied on individuals of on corporations or unincorporated businesses where the income is taxed distinctly from individual income.

Independent operations A group of selfsupporting activities under control of a college or university. For purposes of financial surveys conducted by the Center for Education Statistics, this category is composed principally of Federally Funded Research and Development Centers (FFRDC).

Institutional support The category of higher education expenditures that includes day-to-day operational support for colleges, excluding expenditures for physical plant operations. Examples of institutional support include general administrative services, executive direction and planning, legal and fiscal operations, and community relations.

Instruction That category including expenditures of the colleges, schools, departments, and other instructional divisions of higher education institutions and expenditures for departmental research and public service which are not separately budgeted. Includes expenditures for both credit and noncredit activities. Excludes expenditures for academic administration where the primary function is administration (e.g., academic deans).

Instructional staff Full-time-equivalent number of positions, not the number of different individuals occupying the positions during the school year. In local schools includes all

public elementary and secondary (junior and senior high) day-school positions that are in the nature of teaching or in the improvement of the teaching-learning situation. Includes consultants or supervisors of instruction, principals, teachers, guidance personnel, librarians, psychological personnel, and other instructional staff. Excludes administrative staff, attendance personnel, clerical personnel, and junior college staff.

Junior high school A separately organized and administered secondary school intermediate between the elementary and senior high schools, usually including grades 7, 8, and 9 (in a 6-3-3 plan) or grades 7 and 8 (in a 6-2-4 plan).

Labor force Persons employed as civilians, unemployed, or in the armed services during the survey week. The "civilian labor force" comprises all civilians classified as employed or unemployed.

Local education agency See School district.

Mandatory transfer A transfer of current funds that must be made in order to fulfill a binding legal obligation of the institution. Included under mandatory transfers are debt service provisions relating to academic and adminstrative buildings, including (1) amounts set aside for debt retirement and interest and (2) required provisions for renewal and replacement of buildings to the extent these are not financed from other funds.

Master's degree A degree awarded for successful completion of a program generally requiring 1 or 2 years of full-time college-level study beyond the bachelor's degree. One type of master's degree including the Master of Arts degree, or M.A., and the Master of Science degree, or M.S., is awarded in the liberal arts and sciences for advanced scholarship in a subject field or discipline and demonstrated ability to perform scholarly research. A second type of master's degree is awarded for the completion of a professionally oriented program, for example, an M.Ed. in education, an M.B.A. in business administration, an M.F.A. in fine arts, an M.M. in music, an M.S.W. in social work, and an M.P.A. in public administration. A third type of master's degree is awarded in professional fields for study beyond the first-professional degree, for example, the Master of Laws (LL.M.) and Master of Science in various medical specializations.

**Mathematics** A group of instructional programs that describes the science of logical symbolic language and its application.

**Mean test score** The score obtained by dividing the sum of the scores of all individuals in a group by the number of individuals in that group.

**Metropolitan population** The population residing in Standard Metropolitan Statistical Areas (SMSA's). See Standard Metropolitan Statistical Area.

**Migration** Geographic mobility involving a change of usual residence between clearly defined geographic units, that is, between counties, States, or regions.

Minimum-competency testing Measuring the acquisition of competence or skills to or beyond a certain specified standard.

National Assessment of Educational Progress (NAEP) See Guide to Sources.

Newly qualified teacher Persons who (1) first became eligible for a teaching license during the period of the study referenced or who were teaching at the time of survey but were not certified or eligible for a teaching license and (2) had never held full-time, regular teaching positions (as opposed to substitute) prior to completing the requirements for the degree which brought them into the survey.

**Nonmetropolitan residence group** The population residing outside Standard Metropolitan Statistical Areas. See Standard Metropolitan Statistical Area.

**Nonresident alien** A person who is not a citizen of the United States and who is in this country on a temporary basis and does not have the right to remain indefinitely.

Nonsupervisory instructional staff Persons such as curriculum specialists, counselors, librarians, remedial specialists, and others possessing education certification but not responsible for day-to-day teaching of the same group of pupils.

**Occupational home economics** Courses of instruction emphasizing the acquisition of

competencies needed for getting and holding a job or preparing for advancement in an occupational area using home economics knowledge and skills.

**Part-time enrollment** The number of students enrolled in higher education courses with a total credit load less the 75 percent of the normal full-time credit load.

Personal income Current income received by persons from all sources minus their personal contributions for social insurance. Classified as "persons" are individuals (including owners of unincorporated firms), nonprofit institutions serving individuals, private trust funds, and private noninsured welfare funds. Personal income includes transfers (payments not resulting from current production) from government and business such as social security benefits, military pensions, etc., but excludes transfers among persons.

**Physical plant assets** Includes the values of land, buildings, and equipment owned, rented, or utilized by colleges. Does not include those plant values which are a part of endowment or other capital fund investments in real estate. Excludes construction in progress.

**Postbaccalaureate enrollment** The number of graduate and first-professional students working towards advanced degrees and of students enrolled in graduate-level classes but not enrolled in degree programs. See also Graduate enrollment and First-professional enrollment.

**Private school or institution** A school or institution which is controlled by an individual or agency other than a State, a subdivision of a State, or the Federal government, which is usually supported primarily by other than public funds, and the operation of whose program rests with other than publicly elected or appointed officials.

**Property tax** The sum of money collected from a tax levied against the value of property.

**Proprietary institution** An educational institution that is under private control but whose profits derive from revenues subject to taxation.

**Public school or institution** A school or institution controlled and operated by publicly elected or appointed officials and deriving its primary support from public funds.

**Pupil-teacher ratio** The enrollment of pupils at a given period of time, divided by the full-time-equivalent number of classroom teachers serving these pupils during the same period.

Racial/ethnic group Classification indicating general racial or ethnic heritage based on self-identification, as in data collected by the Bureau of the Census or on observer identification, as in data collected by the Office of Civil Rights. These categories are in accordance with the Office of Management and Budget standard classification scheme presented below:

White A person having origins in any of the original peoples of Europe, North Africa, or the Middle East. Normally excludes persons of Hispanic origin except for tabulations produced by the Bureau of the Census, which are noted accordingly in this volume.

**Black** A person having origins in any of the black racial groups in Africa. Normally excludes persons of Hispanic origin except for tabulations produced by the Bureau of the Census, which are noted accordingly in this volume.

*Hispanic* A person of Mexican, Puerto Rican, Cuban, Central or South American, or other Spanish culture or origin, regardless of race.

Asian or Pacific Islander A person having origins in any of the original peoples of the Far East, Southeast Asia, the Indian subcontinent, or the Pacific Islands. This area includes, for example, China, India, Japan, Korea, the Philippine Islands, and Samoa.

American Indian or Alaskan Native A person having origins in any of the original peoples of North America and maintaining cultural identification through tribal affiliation or community recognition.

**Remedial education** Instruction for a student lacking those reading, writing, or math skills necessary to perform college-level work at the level required by the attended institution.

Revenues All funds received from external sources, net of refunds, and correcting transactions. Noncash transactions such as receipt of services, commodities, or other receipts "in kind" are excluded as are funds received from the issuance of debt, liquidation of investments, and nonroutine sale of property.

**Salary** The total amount regularly paid or stipulated to be paid to an individual, before deductions, for personal services rendered while on the payroll of a business or organization.

Sales tax Tax imposed upon the sale and consumption of goods and services. It can be imposed either as a general tax on the retail price of all goods and services sold or as a tax on the sale of selected goods and services.

Scholarships and fellowships This category of college expenditures applies only to money given in the form of outright grants and and trainee stipends to individuals enrolled in formal coursework, either for credit or not. Aid to students in the form of tuition or fee remissions is included. College Work Study funds are excluded and are reported under the program in which the student is working. In the tabulations in this volume, Pell Grants are not included in this expenditure category.

Scholastic Aptitude Test (SAT) An examination administered by the Educational Testing Service and used to predict the facility with which an individual will progress in learning college-level academic subjects.

**School** A division of the school system consisting of students in one or more grade or other identifiable groups and organized to give instruction of a defined type. One school may share a building with another school or one school may be housed in several buildings.

**School climate** The social system and culture of the school, including the organizational structure of the school and values and expectations within it.

**School district** An education agency at the local level that exists primarily to operate public schools or to contract for public school services. Synonyms are "local basic administrative unit" and "local education agency."

**Science** The body of related courses concerned with knowledge of the physical and biological world and with the processes of discovering and validating this knowledge.

Secondary instructional level The general level of instruction provided for pupils in secondary schools (generally covering grades 7 through 12 or 9 through 12) and any instruction of a comparable nature and difficulty pro-

vided for adults and youth beyond the age of compulsory school attendance.

Secondary school A school comprising any span of grades beginning with the next grade following an elementary or middle-school (usually 7, 8, or 9) and ending with or below grade 12. Both junior high schools and senior high schools are included.

**Senior high school** A secondary school offering the final years of high school work necessary for graduation and invariably preceded by a junior high school.

Social studies A group of instructional programs that describes the substantive portions of behavior, past and present activities, interactions, and organizations of people associated together for religious, benevolent, cultural, scientific, political, patriotic, or other purposes.

Socioeconomic status (SES) For the "High School and Beyond" study and the "National Longitudinal Study of the High School Class of 1972," the SES index is a composite of five equally weighted, standardized components: father's education, mother's education, family income, father's occupation, and household items. The terms high, middle, and low SES refer to the upper, middle two, and lower quartiles of the weighted SES composite index distribution.

Special education Direct instructional activities or special learning experiences designed primarily for students identified as having exceptionalities in one or more aspects of the cognitive process or as being underachievers in relation to general level or model of their overall abilities. Such services usually are directed at students with the following conditions: (1) physically handicapped; (2) emotionally handicapped; (3) culturally different, including compensatory education; (4) mentally retarded; (5) students with learning disabilities. Programs for the mentally gifted and talented are also included in some special education programs. See also Handicapped.

Standardized test A test composed of a systematic sampling of behavior, administered and scored according to specific instructions, capable of being interpreted in terms of adequate norms, and for which there is data on reliability and validity.

Standardized test performance The weighted distributions of composite scores from standardized tests used to group students accifding to performance.

Standard Metropolitan Statistical Area A large population nucleus and the nearby communities which have a high degree of economic and social integration with that nucleus. Each SMSA consists of one or more entire counties (or county equivalents) that meet specified standards pertaining to population, commuting ties, and metropolitan character. In New England, towns and cities, rather. than counties, are the basic units. SMSA's are designated by the Office of Management and Budget. An SMSA includes a city and, generally, its entire urban area and the remainder of the county or counties in which the urban area is located. An SMSA also includes such additional outlying counties which meet specified criteria relating to metropolitan character and level of commuting of workers into the central city or counties. Specified criteria governing the definition of SMSA's recognized before 1950 are published in Standard Metropolitan Statistical Areas: 1975, issued by the Office of Management and Budget. New SMSA's were designated when 1950 counts showed that they met one or both of the following criteria:

- 1. Included a city with a population of at least 50,000 within their corporate limits, or
- Included a Census Bureau-defined urbanized area (which must have a population of at least 50,000) and a total SMSA population of at least 100,000 (or, in New England, 75,000).

Student An individual for whom instruction is provided in an educational program under the jurisdiction of a school, school system, or other education institution. No distinction is made between the terms "student" and "pupil," though "student" may refer to one receiving instruction at any level while "pupil" refers only to one attending school at the elementary or secondary level. A student may receive instruction in a school facility or in another location, such as at home or in a hospital. Instruction may be provided by direct student-teacher interaction or by some other approved medium such as television, radio, telephone, and correspondence.

Supervisory staff Principals, assistant principals, and supervisors of instruction. Does not include superintendents or assistant superintendents.

**Tex base** The collective value of objects, assets, and income components against which a tax is levied.

**Teacher shortage** The number of teaching positions vacant, abolished, or withdrawn because a candidate was sought and not found, courses were eliminated because of budget cuts or administrative decisions not to offer courses in a given field, a teacher was laid off, or a position was filled by a temporary substitute.

Technical education A program of vocational instruction that ordinarily includes the study of the sciences and mathematics underlying a technology, as well as the methods, skills, and materials commonly used and the services performed in the technology. Technical education prepares individuals for positions—such as draftsman or lab technician—in the occupational area between the skilled craftsman and the professional person.

Total expenditure per pupil in average daily attendance Includes all expenditures allocable to per pupil costs divided by average daily attendance. These allocable expenditures include current expenditures for regular school programs, interest on school debt, and capital outlay. Beginning in 1980-81, expenditures for State administration are excluded and expenditures for other programs (summer schools, community colleges, and private schools) are included.

Trade and industrial occupations The branch of vocational education which is concerned with preparing persons for initial employment or with updating or retraining workers in a wide range of trade and industrial occupations. Such occupations are skilled or semiskilled and are concerned with layout designing, producing, processing, assembling testing, maintaining, servicing, or repairing any product or commodity.

• Transcript An official list of all courses taken by a student at a school or college showing the final grade received for each course,

with definitions of the various grades given at the institution.

**Tuition and fees** A payment or charge for instruction or compensation for services, privileges, or the use of equipment, books, or other goods.

Unclassified students Students who are not candidates for a degree or other formal award, although they are taking higher education courses for credit in regular classes with other students.

Undergraciuate students Students registered at an institution of higher education who are working in a program leading to a baccalaureate degree or other formal award below the baccalaureate such as an associate degree.

Unemployed Civilians who had no employment but were available for work and (1) had engaged in any specific jobseeking activity within the past 4 weeks, (2) were waiting to be called back to a job from which they had been laid off, or (3) were waiting to report to a new wage or salary job within 30 days.

University An institution of higher education consisting of a liberal arts college, a diverse graduate program, and usually two or more professional schools or faculties and empowered to confer degrees in various fields of study. For purposes of maintaining trend data in this publication, the selection of university institutions has not been revised since 1982.

Visual and performing arts A group of instructional programs that generally describes the historic development, aesthetic qualities, and creative processes of two or more of the visual and performing arts.

**Vocational education** A program of studies designed to prepare students for employment in one or more semiskilled, skilled, or technical occupations.

**Vocational home economics** Vocational courses of instruction emphasizing the acquisition of competencies needed for getting and holding a job or preparing for advancement in an occupational area using home economics knowledge or skills.
